Introduction

Some 50% of cancers that affect women are located in the genital organs or in the breast. Gynaecological and breast cancer treatment is interdisciplinary and requires all skills and knowledge in all fields of competences, i.e., good surgical training as well as knowledge about radiotherapy, chemotherapy, hormone therapy, immunotherapy, and genetics and communication.

In Europe, the European Union of Medical Specialists (UEMS) has recognised gynaecological oncology as a subspecialty. It is the responsibility of the national and international societies (and in some countries of the government) to organise and recognise training and certification in order to identify the subspecialists.

In several European countries, breast cancer is not treated by gynaecological oncologists. In these countries, fellows do not have to include this component in their training programme, but it is recommended that they become familiar with the principles and practice of the management of breast diseases. The ESGO accreditation and certification programme only evaluates the training in gynaecologic oncology; it does NOT evaluate training in breast cancer management.

Educational objectives and requirements for training in this subspecialist area have been defined in this revised edition of the curriculum through the Delphi method, involving all recognised training centres and trainees in conjunction with acknowledged experts from ESGO. The role of the gynaecological oncological subspecialist is complementary to, and not in competition with, that of a specialist in Obstetrics and Gynaecology.

Competencies and competences in Gynaecological Oncology are in line with those for general training in Obstetrics and Gynaecology, according to the PACT programme by the European Board and College of Obstetricians and Gynaecologists (EBCOG). Certain components of the end-point requirements for Gynaecological Oncological subspecialists may be achieved during an elective year, provided these competencies are acquired following the rules of the Curriculum and documented accordingly in the portfolio ([see matrix 10.2](#)).

The processes for training centre accreditation and certification with an ESGO Diploma of European Gynaecological Oncologist are voluntary. ESGO will not contact prospective centres or diploma candidates. Centres apply voluntarily. Equally, each candidate for the ESGO subspecialty certification diploma is responsible for registering in the fellowship before starting the process. The fellow will be responsible for the costs for registration, the completion of the eLogbook, taking the exam, and applying for certification. Any related costs are defined by the Financial Committee. The candidate is also responsible for completing the application, submitting all materials to the ESGO office on time, and meeting all deadlines. ESGO will make the final decision concerning the applicant's eligibility for certification with the ESGO Diploma of European Gynaecological Oncologist, as it does for a centre's eligibility for accreditation as a Training Centre for Gynaecological Oncology.

This guideline describes training up to first certification, upon which the ESGO Diploma is awarded, but does not describe recertification, as there is not yet a European system to monitor and manage this.

1. Executive summary

1.1 Introduction

The following executive summary presents the main principles of the ESGO Curriculum of gynaecological oncology subspecialty training. This summary provides a succinct overview of the requirements for the training centre and for the diploma candidate that must be met prior to commencing training and in order for successful completion.

1.2 New Curriculum features

This Curriculum is the first completely revised ESGO curriculum for the gynaecological oncology subspecialty training and replaces the 2010 Curriculum. The main features of this edition are:

- The Curriculum is now consensus-based (for a summary of the consensus outcomes, see 12.5),
- It adheres to the principles of competence-based assessment,
- It follows and is partly integrated with the EBCOG PACT curriculum for general training in obstetrics and gynaecology.
- A real-time portfolio is now required, for which a logbook is provided.
- Successful completion of the curriculum and a passing mark on the ESGO theoretical examination are mandatory requirements for obtaining the ESGO certification.

1.3 Accreditation criteria for a training centre

An institution can be accredited for training ESGO fellows/trainees according to the ESGO Curriculum after an onsite visit has established that qualitative and quantitative criteria to ensure adequate training and exposure have been fulfilled. However, in countries with a national or regional ESGO-recognised subspecialty training and auditing, ESGO will not perform accreditation visits and no separate ESGO accreditation certificates will be issued.

1.3.1 Qualitative criteria

- Availability of data managers.
- One (1) designated and qualified Educational Supervisor per trainee.
- One (1) Training Programme Director.
- At least the Training Programme director and/or the Educational Supervisor has participated in a train-the-trainers course at least once in the five (5) years prior to accreditation.
- Radiotherapy is available in the centre or in an affiliated hospital.
- All cancer cases are systematically (and at least once) discussed in a multidisciplinary team.
- Availability of theatres equipped for teaching both open and minimally invasive surgery.
- Availability of specialised oncology nurses.
- A hospital-wide post-graduate teaching programme across all oncological specialties.
- Internal quality control and audit.
- Mortality and morbidity registration and meetings.

1.3.2 Quantitative criteria

- Three (3) full-time equivalent gynaecological oncologists, one (1) additional for each additional fellow/trainee.
- At least 150 new genital cancer cases per year.
- At least ten (10) new vulvar cancer cases per year.
- At least a total of 100 radical surgery cases per year per trainee.
- At least 40 cytoreductive procedures per year.
- At least 60% of early endometrial cancers undergo minimally invasive surgery (MIS).

1.4 Qualifying criteria for a fellow/trainee

Candidates for gynaecological oncology subspecialty training must:

- Be registered as a gynaecologist or have equivalent national approval to start subspecialty training.
- Present a Training Programme to the ESGO Educational Committee prior to starting the fellowship.

There is no limit placed on age or nationality.

1.5 Certifying criteria for a fellow/trainee

1.5.1 Qualitative criteria

- Satisfactory completion of the regularly updated portfolio, including formative assessments for all required procedures and skills as well as regular summative assessments.
- The training programme should have been followed for at least one (1) year in an ESGO-accredited centre.
- A passing mark on the ESGO Exam.

1.5.2 Quantitative criteria

- At least three (3) formative assessments (e.g., OSATS) for each of the procedures defined in the modules.
- Surgical volume, i.e., procedures performed as primary surgeon:
 - Ten (10) radical hysterectomies or parametrectomies.
 - 30 pelvic lymph node dissections (including sentinel lymph node procedures).
 - Ten (10) para-aortic lymph node dissection.
 - Five (5) local radical vulvar excisions.
 - Five (5) inguino-femoral lymph node evaluations and dissections.
 - At least 20 cytoreductive surgeries as the first surgeon, including either bowel resection or upper abdominal procedures or bulky lymph node resection.
 - 30 minimally invasive procedures (excluding simple laparoscopies).

1.5.3 Other skills:

- 20 consultations for breaking bad news.
- Two (2) clinical audit projects as the responsible person.
- Completion of a course in leadership and management.
- Development of a protocol/guideline/patient information sheet.
- Research requirements: publish at least two (2) peer-reviewed publication (as any author) during and part of the training OR successfully complete (the equivalent of) an Advanced Professional Module of Clinical Research.

The portfolio/logbook must be completed within four (4) years of beginning the training programme.

Fellows training in centres from countries with a national, ESGO-recognised accreditation system will be eligible to participate in the ESGO Gynaecological Oncology diploma certification process. In addition to pursuing the national certificate or diploma in these countries, the fellow may request an ESGO Diploma. A separate ESGO Diploma will only be issued to those who have obtained the national certificate and passed the ESGO Exam.

1.6 Validity

1.6.1 Validity of centre accreditation

Accreditation is granted to a centre for five (5) years. In some exceptions, the Education Committee can advise the ESGO Council to grant a conditional (re-)accreditation for a period of less than five years.

After five years, an online tele-visit (see 3.7.) may suffice to be granted re-accreditation once for a further five years.

Assessment at re-accreditation includes:

- A review of the number and performance of fellows.
- Structured feedback on the centre and the training programme from fellows and trainers.
- Confidential interviews with fellows.
- An up-to-date portfolio from current trainees.

1.6.2 Validity of fellow certification

The diploma documents the fact that the fellow has successfully completed training and has passed the ESGO Exam. There is no system of re-certification once a fellow has been issued the diploma, although it is the responsibility of the respective health authorities to check whether a subspecialist maintains adequate proficiency and knowledge.

2. Principles of competence-based training (and a competency framework)

2.1 Introduction

The ESGO Curriculum is established on the guiding principles of competence-based training and a medical education competency framework. These principles and the framework together form the blueprint for training gynaecological oncology fellows. The aim of this Curriculum and its certification process (e.g., the written theory exam and other Curriculum components) is to facilitate the graduation of a fellow to a specialist with a certain minimum standard of proficiency that can satisfy patients and regulators. This will form the initial step in the clinician's lifelong journey of learning.

There are ten principles of competence-based training. These guide the structure of the curriculum whilst the competency framework of medical education helps to determine the scope of the contents. The standards pertaining to each element of the content is determined by the current practice of evidence-based medicine or best practice.

Ten principles of competence-based training

1. The training is based on the curriculum developed from the competency standards.
2. Learning has a modular structure.
3. Training delivery is individualised and self-paced.
4. Training is based on work that must be performed.
5. Training materials are directly related to the competency standards and the curriculum modules.
6. Learner assessment is based on the collection of evidence of the performance of work to the industry or organisational required standards.
7. Training is based on both on- and off-the-job components.
8. The system allows for recognition of prior/current learning.
9. The training allows learners to enter and exit the program at different times and levels as well as receive recognition for modules (competencies) attained at any point. (This is made possible by the use of a portfolio.)
10. Approved training programs are nationally accredited.

2.2 Competency framework for medical education

There are a number of such frameworks, and two of the best-established frameworks originate from North America. This curriculum uses the Accreditation Council for Graduate Medical Education (ACGME) framework.

ACGME Core Competencies

In 1999, the ACGME selected and endorsed a set of competencies to help define the foundational skills every practicing physician should possess. These six ACGME Core Competencies, as they are called, were developed as a way to shape and evaluate the education of residents and fellows. This helps to create an educational programme that reflects skills and attributes that are directly relevant to patient care, preparing fellows for a safe and effective daily practice.

The six ACGME Core Competencies are:

1. Practice-based learning and improvement.
2. Patient care and procedural skills.
3. Systems-based practice.
4. Medical knowledge.
5. Interpersonal and communication skills.
6. Professionalism.

In the following paragraphs, further details about each of the six core competencies are outlined. At the end of each are suggested activities and evidence, but these are not exhaustive.

ACGME Core Competencies measure a physician's ability to:

- a) Competently manage illness.
- b) Offer and implement strategies to continuously improve patient health and wellness.
- c) Offer advice and resources to prevent disease in patients.
- d) Provide not only physical treatment but also emotional support as the physician cares for patients and interacts with patients' families and support systems.

2.3 Core competencies

2.3.1 Practice-based learning and improvement (PBLI)

Through patient care, the practicing physician is exposed to new information and innovations. Achieving initial certification and recertification through a combination of continuing educational opportunities and PBLI activities can have great benefits for physicians. Practice-based learning is an efficient and effective way to acquire and apply knowledge.

Demonstration of competency in PBLI occurs when a fellow, and later, a specialist, displays the ability to:

- investigate and evaluate patient care practices,
- appraise and assimilate scientific evidence, and
- improve the practice of medicine.

PBLI sub-competencies:

- (1) locate, appraise, and assimilate evidence from scientific studies related to patient health problems.
- (2) demonstrate self-directed learning; and
- (3) improve systems in which the physician provides care.

Related activities and evidence

Journal clubs, courses, conferences, self-reflection, auditing and quality improvement projects.

2.3.2 Patient care and procedural skills

This competency highlights the necessity of physicians maintaining a patient-centred approach to care. This entails forming a bond of trust between the patient and doctor. The specialist must be able to demonstrate their ability to listen and absorb medical histories, diagnose, properly inform and educate, and prescribe and perform necessary procedures in a way that maximises patient comfort.

Fellows and specialists who embody this competency will demonstrate their knowledge with the ability to:

- Gather essential and accurate information about the patient.
- Counsel patients and family members.
- Make informed diagnostic and therapeutic decisions.
- Prescribe and perform essential medical procedures.
- Provide effective health management, maintenance, and prevention guidance.

Patient care and procedural skills sub-competencies are defined as:

1. Patient- and family-centred,
2. compassionate,
3. explained in developmentally appropriate terms,
4. an effective treatment of health problems, and
5. encouraging of overall health.

Related activities and evidence

Case presentation/discussion during MDT/tumour board meeting, advanced communication course, or breaking bad news training.

Assessments: OSATS, case-based discussions (CBD), multi-source feedback assessment.

2.3.3 Systems-based practice

This competence focuses on the principles of good medical practice: safety and quality in health care, patient advocacy, health insurance, health care economics, transitions of care, different health care systems, patient-centred medical home care, and chronic care.

Each of these elements involve complex systems. The specifics of each health care system will vary from one country to another, but it remains important for the fellow to become competent in engaging with these systems if they are to function in a safe and effective way.

Systems-based practice sub-competencies are defined as:

1. Working effectively in various health care delivery settings and systems relevant to their clinical specialty.
2. Coordinating patient care within the health care system relevant to their clinical specialty.
3. Incorporating considerations of cost awareness and risk/benefit analysis in patient care.
4. Advocating for quality patient care and optimal patient care systems.
5. Working in inter-professional teams to enhance patient safety and improve patient care quality.

Related activities and evidence

Root-cause analysis of an adverse event, quality improvement project.

Multi-source feedback assessment, evidence of management and leadership skills.

2.3.4 Medical knowledge

The body of knowledge which guides our practice is continually expanding, and the rate of change is also increasing. In order to continue to offer treatment that is safe and effective, the principle of lifelong learning must be observed. This usually manifests in the form of continued medical education (CME) and continued professional development (CPD) for acquiring and applying knowledge and skills, respectively.

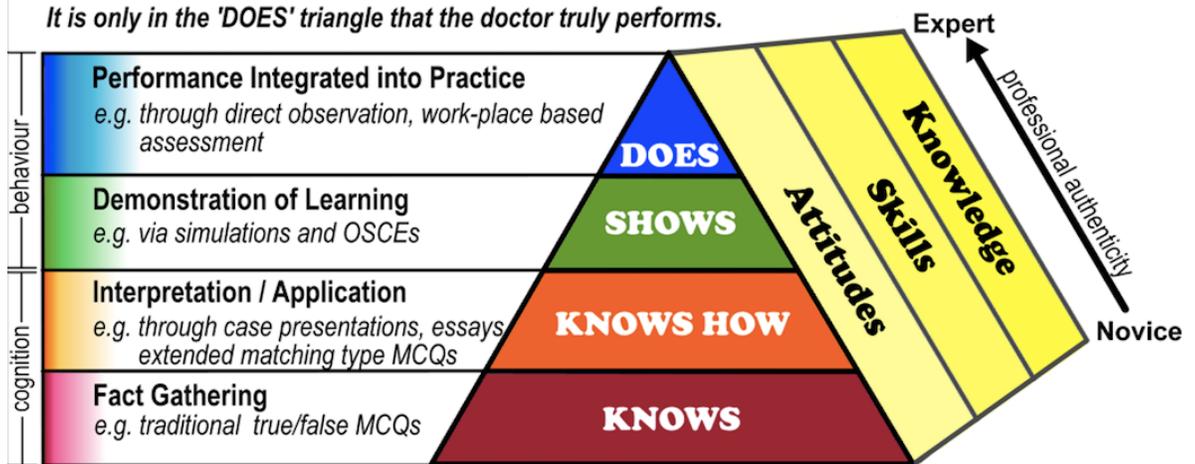

The fellow must learn the skills and develop the capacity that is required for their continued professional development as a specialist. Each country will have an appraisal and validation system to ensure that physicians are up to date with their practice.

The application of medical knowledge should also be measured using Miller's Pyramid, a framework for assessing clinical competence developed in 1990. According to it, a resident progresses from "Knows" to "Knows How" to "Shows How" to "Does."

The "Does" component is the key: What a resident may know and be able to demonstrate in a controlled setting should match how they perform in actual day-to-day interactions with patients on a regular basis.

Miller's Pyramid of Clinical Competence

It is only in the 'DOES' triangle that the doctor truly performs.

Adapted by R. Mehay and R. Burns, 2009. In R. Mehay (Ed.), *The Essential Handbook for GP Training and Education* (chapter 29; p414). Used with permission.

Medical knowledge sub-competencies are defined as:

1. An investigative and analytical approach to clinical problem-solving and knowledge acquisition.
2. An ability to apply medical knowledge to clinical situations.
3. An ability to teach others.

Related activities and evidence

Journal clubs, case-based discussions, teaching skills, conferences, courses, examinations.

2.3.5 Interpersonal and communication skills

To demonstrate competence in this domain, the fellow needs to demonstrate the ability to effectively exchange information with patients, their families, and colleagues.

Interpersonal and communication skills sub-competencies are defined as:

1. Creating and sustaining a therapeutic relationship with patients and families.
2. Working effectively as a member or leader of a health care team.

Related activities and evidence

Communication skills course, multi-source feedback assessment, mini-CEX assessment, MDT/tumour board interaction, evidence of local/regional/international engagement in professional activity.

2.3.6 Professionalism

The professionalism domain relates to the professional attitude and behaviour of the fellow. Alongside knowledge and skills, attitude, and behaviour form the third key pillar of any curriculum.

The expectation for all medical professionals is that each and every one will treat all people with respect, compassion, and dignity. Patient needs will supersede a resident's self-interest. And residents accept and understand that they are accountable to not only the patient but also to their colleagues and society as a whole. Lastly, the professionalism competency holds fast to the principle of treating all the diverse patient populations with sensitivity and respect. A professional physician will understand and recognise the unique effects of age, gender, culture, race, religion, disability, and sexual orientation on a patient's health and well-being and act accordingly to provide care that is cognisant of these cultural ramifications.

Professionalism sub-competencies are defined as:

1. Professional conduct and accountability.
2. Demonstrating humanism and cultural proficiency.
3. Maintaining emotional, physical, and mental health and pursuing continual personal and professional growth.

Related activities and evidence

Management and leadership experience, and patient advocacy, as evidenced by CBD, MSF assessments, and other activities.

3. Accreditation of training centres

3.1 Introduction

In all European countries, approval of training and trainers should be the responsibility of a national or regional authority that has the power to withdraw recognition if necessary.

An institution can be accredited for training ESGO fellows according to the ESGO Curriculum after an onsite visit has established that qualitative and quantitative criteria to ensure adequate training and exposure have been fulfilled. However, in countries with an existing nationally or regionally organised subspecialty training, no separate ESGO centre accreditation will be required or performed.

Centres can request ESGO accreditation using the Standard Operational Procedures (SOP) as outlined in addendum [12.3](#).

3.2 Qualitative accreditation criteria for centres

Recognition of an institution as a subspecialist training centre in gynaecological oncology is based on approval by the ESGO Council, as advised by its Education Committee based on the following qualitative criteria:

- The centre has an internal quality control and audit system, which at least monitors and provides details of mortality and complications of all treated patients
- In addition to organised teaching sessions on a departmental level, there is a hospital-wide postgraduate teaching programme (this could encompass general oncological items, such as oncogenetics, intensive care, etc., but also even more general items such as epidemiology, statistics, and ethics, to name a few)
- A multidisciplinary team (MDT) is available with the following characteristics:
 - The team includes at least a gynaecological oncologist, a radiologist, a pathologist, and a physician certified to deliver chemotherapy (a gynaecologic oncologist in countries where the subspecialty is structured and/or a medical oncologist with special interest in gynaecologic oncology)
 - an MDT meeting is held regularly (i.e., at least weekly)
 - all cancer cases are systematically (and at least once) discussed at an MDT meeting
 - all decisions for any major therapeutic intervention are discussed at the MDT meeting
 - the MDT has a role in the quality control of treatment (protocols)
 - the fellow has a defined role within the MDT, e.g., presentation of cases.
- Necessary services to provide and evaluate oncological treatment are available:
 - Radiotherapy unit (should be available in the hospital or in an affiliated hospital)
 - Chemotherapy unit
 - Cytopathology unit
 - Psycho-oncological care
 - Mortality and morbidity meetings (existence of a structured prospective regular reporting of postoperative complications. The data to be recorded are reoperations, interventional radiology, readmissions, secondary transfers to intermediate or intensive care units, and deaths.) Optimally, 100% of complications are prospectively recorded, i.e., they have been continuously recorded, but at least selected cases should be discussed at morbidity and mortality conferences to be held at least once a year
 - Theatres equipped for teaching both open and minimally invasive surgery
 - Specialised or at least dedicated oncology nurses
 - Data manager(s), i.e., functionaries who file and process patient data for quality control and/or clinical trials. The aim of this requirement is to prevent the fellow from being responsible for these tasks, including, e.g., filling and filing patient/case report forms
 - Annual statistics with at least the data required to assess quantitative criteria for a centre
- The centre services and plans for the referral and transfer of patients who would benefit from subspecialty facilities, expertise, and experience.

- There is established close collaboration with related disciplines to provide the highest degree of teamwork and concentration of resources for the intensive investigation and management of such patients.
- There is established close collaboration with other obstetricians and gynaecologists and related specialists within and outside of the centre, including major regional roles in continuing postgraduate education and training, research advice, and co-ordination and audit.
- An established formal training programme is in place, according to the requirements of national bodies. If a national training programme does not exist, the centre should follow the European standards as defined in ESGO Subspecialty Training Programme and Logbook. In this latter case, the training programme should be adopted and provided (an English-language version of the training programme) together with the application for accreditation. The formal established curriculum programme should cover at least two, and at the most three, years of the equivalent of the full-time training.
- There is an established formal tutorship. The Training Programme Director and Educational Supervisors must be identified. The Training Programme Director and Educational Supervisors will be consultants with special experience in the relevant subspecialty field.
- At least the Training Programme director and/or the Educational Supervisor have participated in a train-the-trainers course at least once in the five years prior to accreditation (or an equivalent supervision course aimed at improving skills to teach others). See below for further details on their respective roles.
- Institutional access to electronic resources, including major medical journals, laboratory, and other resources to support subspecialty work, training, and research is available.
- Resources for a research programme related to the subspecialty are available.
- There is an adequate workload providing a full range of experience in the subspecialty; alternatively, two or more centres may combine to provide a programme with all the required experience. In this case, both centres should be visited and assessed, and together comply with the requirements.

In addition to these requirements, there should be adequate, structured, and continuous supervision for the fellow(s) by dedicated officers:

The *Training Programme Director* co-ordinates and is actively involved in the training programme, accepts the main responsibility for its supervision, and maintains the standards according to ESGO (and EUMS). The responsibilities of the Training Programme Director include securing ESGO accreditation, appointing a suitable fellow to the programme, and overall management of the programme.

If the programme director changes the programme that will affect the requirements of this curriculum, the training centre has to be reassessed.

The *Educational Supervisor* is a core faculty member who is qualified and available to be responsible for the overall supervision and management of a specific trainee's educational progress during her/his fellowship. This role may be performed by the Training Programme Director or a deputy, but each subsequent trainee should have a separate Educational Supervisor.

Educational Supervisor responsibilities include:

- Personal and professional development of the trainee during the fellowship. The educational supervisor facilitates learning for fellows in accordance with adult learning principles and needs to ensure that patient safety and clinical governance are respected. The educational supervisor also safeguards a safe and encouraging training environment.

- Appreciating the learning opportunities intrinsic to all elements of clinical care. The educational supervisor provides regular, appropriate appraisal and feedback that is appropriate to the fellow's progression through the ESGO curriculum.
- Trainee assessment using workplace-based assessment tools.
- Ensuring that both medical and non-medical staff involved in clinical training understand the curricular requirements.
- Guaranteeing that the logbook and documents sent to ESGO office after completed training are consistent with the onsite training.
- Monitoring the moral and ethical behaviour of the fellow.

3.3 Quantitative accreditation criteria for centres

Volume is important to ensure the fellow has sufficient exposure to cases and, therefore, the following quantitative requirements must be met by each training centre.

- Adequate medical faculty staffing of at least three (3) gynaecological oncological consultants (i.e., full-time equivalent positions who consult on pelvic and gynaecological malignancies excluding breast cancer) for the first fellow.
- At least one (1) additional consultant for each additional fellow, in order to enable the trainee to be engaged in his/her subspecialty field on a full-time basis (or in the case of a part-time trainee, during all of his/her normal working hours).
- Departmental scientific activity in gynaecologic oncology by the publication of a minimum of one original research or review article per year in peer-reviewed journals within the past five years.
- At least 150 new genital cancer cases per year, of which
 - at least ten (10) new vulvar cancer cases per year.
- At least 100 radical surgery cases per year (all cancers), of which
 - at least one (1) type of radical procedure performed by a minimally invasive approach, and
 - at least 40 cytoreductive procedures per year.

A 'radical' case is defined as any surgery that requires the knowledge and expertise of a gynaecological oncologist and is aimed at complete tumour removal according to oncological principles (e.g., radical hysterectomy, parametricity, debulking, staging procedure).

The minimum number of radical procedures includes both open and laparoscopic cases for at least all pelvic procedures. In order to guarantee adequate exposure of the fellow and as a sign of advanced treatment, 60% of all (non-radical and radical) surgery for early, stage I or II, endometrial cancer should be performed by minimally invasive surgery.

For each additional fellow, the centre will need an additional 100 radical surgery cases and an equivalent number of extra cases of cytoreductive procedures per year as stipulated for the training of one fellow.

3.4 Validity of Accreditation for centres

ESGO accreditation may be granted for five (5) years. The ESGO Council can decide to grant conditional accreditation (e.g., if recommendations are being made that should be fulfilled within the normal period of validation) for a period less than the normal period of validation. The conditions for such conditional accreditation should be defined each time for each individual case.

3.5 Accreditation visiting team

Accreditation visits will be conducted by at least:

- One (1) senior gynaecological oncologist = ESGO member of good standing
- One (1) junior gynaecological oncologist = ENYGO member

The visit report is presented to the ESGO Education Committee for approval. The ESGO Council is also informed via a visit report.

3.6 Application for re-accreditation

Re-accreditation will be considered after five (5) years following the first accreditation. The re-accreditation assessment will usually be done according to an online tele-visit, but ESGO may decide to hold an onsite visit on the basis of previous recommendations.

In principle, re-application follows the same procedures as the first application. In addition to standard requirements, the centre should specify actions taken to fulfil recommendations and improvements since the last accreditation visit and review the number and performance of fellows in the past period, including structured feedback from the fellows and trainers about the training programme and the centre, and including an up-to-date portfolio of the current fellow(s).

Accredited centres may apply for re-accreditation six (6) months before the original accreditation expires and, at the latest, six (6) months after expiration. The ESGO office will send a reminder.

3.7 Validity of re-accreditation

After another five (5) years (i.e., 10 years after initial accreditation) re-accreditation require another in-person onsite visit. At the discretion of the ESGO Council, in certain cases, the Educational Committee can waive this requirement and allow the second re-accreditation by tele-visit.

3.8 Withdrawal of accreditation

The ESGO WG Fellowship and Observership can decide to advise ESGO Council to withdraw accreditation due to exceptional circumstances before the normal expiration date of the accreditation.

Failure to meet the requirements laid down in this Curriculum could constitute such exceptional circumstances. Examples are: having more fellows than allowed according to the accreditation, inadequate or insufficient exposure of the fellows to procedures and skills in which they are supposed to be trained, unprofessional conduct of members of the training team towards the fellow.

4. Qualifying criteria for a fellow

Candidates to become a *subspecialty trainee for the ESGO Diploma of European Gynaecological Oncologist* (in this document commonly referred to as 'fellow', or 'trainee' in short) must:

- be a recognised specialist qualified in Obstetrics and Gynaecology after having completed a structured and approved training programme in Obstetrics and Gynaecology, or an equivalent recognition allowing the start of subspecialty training;
- present proof of availability of a recognised training post;
- present a copy of the Training Programme to the Educational Committee of ESGO;
- register the fellowship with ESGO prior to the start of training.

It is also recommended that candidates offer proof of adequate training in colposcopy, e.g., by submitting a certificate as proof of having passed a course of colposcopy organised by the European Federation for Colposcopy (EFC) or by national training authorities which meet the EFC criteria.

There is no restriction placed on age or nationality.

Fellows must submit the application form and report the date they will start their fellowship *before* the fellowship commences.

5. Certifying criteria for a fellow

5.1 Introduction

A fellow can be recognised by ESGO as a European Gynaecological Oncologist after a final assessment is carried out by the ESGO Education Committee that takes into consideration the skills and knowledge based on the qualitative and quantitative criteria and all documented in the logbook.

5.2 Qualitative criteria for certification of a fellow

In order to receive certification (the Diploma), the fellow must meet the following criteria:

- The training schedule and programme are registered with ESGO prior to the start of the fellowship. Any changes in the schedule should be registered.
- The training programme is completed either in one period at an ESGO-accredited centre or, alternatively, in at least a period of one year in an ESGO-accredited centre with the remaining time spent at a non-European nationally recognised centre in a country in which training in gynaecological oncology is recognised, and the curriculum is equivalent to the ESGO curriculum.
- The ESGO portfolio of clinical experience in gynaecological oncology, including both formative and summative assessments, is filled in and kept up-to-date throughout the training and submitted within four (4) years of registration.
- A passing mark is received on the ESGO written theoretical examination that is held at least once each year, matching the rules set by the UEMS/CESMA. The candidate can attempt the written exam once the fellowship training has commenced and must have received a passing mark within six (6) years of the fellowship's starting date (please note that 2 extra years are allowed beyond the time limit set for finalisation of the portfolio in order to allow, e.g., sitting for repeat attempts).
- The fellow must apply for certification (with application form II) within a year after completion of the fellowship or passing the ESGO exam, whichever comes last.

5.3 Quantitative criteria for certification of a fellow

- At least three (3) formative assessments for each of the procedures defined in the modules.
- Surgical volume, i.e., procedures performed as the primary surgeon:
 - 10 radical hysterectomies or parametrectomies.
 - 30 pelvic lymph node dissections (including sentinel lymph node).
 - 10 para-aortic lymph node dissections.
 - Five (5) local radical vulvar excisions.
 - Five (5) inguino-femoral lymph node evaluations and dissections.
 - At least 20 cytoreductive surgeries as first surgeon, including either bowel resection or upper abdominal procedures or bulky lymph node resection.
 - 30 minimal invasive procedures (excluding simple laparoscopies).
- Other skills:
 - 20 times breaking bad news.
 - Two (2) times having been responsible for a clinical audit.
 - Participation in a course for leadership/management (Recommended).
 - One (1) time being responsible for development of a protocol/guideline/patient information sheet.
 - At least two (2) peer-reviewed publications as any author during the time of training or successfully completed (the equivalent of) an Advanced Professional Module of Clinical Research.
- The portfolio/logbook must be completed within four (4) years from the start of the fellowship.

5.4 Final assessment

The final assessment of the fellow is carried out by the ESGO Working Group Fellowship and Observership of the Education Committee, which will take into consideration:

- Participation in Gynaecological Oncology courses, particularly those recognised by ESGO.
- Completion of the ESGO logbook of clinical experience in Gynaecological Oncology.
- Peer-reviewed publications in an internationally recognised journal.
- Proof of passing the ESGO written theoretical Exam.
- A nationally issued diploma if trained in a country with a national ESGO-recognised certification system.

The ESGO Diploma of European Gynaecological Oncologist will typically be officially awarded during one of the yearly ESGO Meetings.

5.5 Certification in countries with a national training programme

Fellows training in centres from countries with a national, ESGO-recognised accreditation system will be eligible to participate in the ESGO Gynaecological Oncology certification process under certain conditions. In any case, ESGO will respect the autonomy of the individual countries that have set rules to govern the quality and quantity of training. In order to avoid a situation in which ESGO certifies a fellow who would be otherwise ineligible for a national certificate, fellows having spent their training period in countries with a national ESGO-recognised certification system will never be issued an ESGO certificate if they have not obtained the national certificate and also passed the ESGO exam.

More specifically, if a trainee in a country with a national training programme has not followed that programme, i.e., having spent training time outside the programme but in a nationally recognised training centre, the trainee may only obtain the ESGO certificate if the trainee follows the same rules as for any EU trainee. In that case, at least one (1) additional year must be spent in an ESGO-accredited Centre in Europe outside the country with a national training programme and the trainee must register the approved (by the training directors of both or all centres) individual training programme with ESGO *before* starting the training. This is irrespective of the location of the centre where the training starts. The trainee must also pass the ESGO Exam.

Next, but not instead of the national certificate or diploma, the fellow may request the issue of an ESGO Certificate. Consequently, a separate ESGO certificate will only be issued to those having a national certificate as well as having passed the ESGO Exam on the usual terms.

More specifically, a trainee who has followed a national programme recognised by ESGO can ask for an additional ESGO certification only after obtaining the local national certification. Individual trainees may request either an ESGO stamp on their national certificate/diploma (which is up to the national society to provide) or an additional ESGO Diploma (as the national certificate is regarded as at least equal to the ESGO certificate). This indeed means that if a trainee has not fulfilled the national requirements for certification, they cannot afterwards ask for ESGO certification, even if he or she subsequently spends at least one year in an European-recognised training centre (since such programme will not have been approved and registered *before* the start of the training).

6. Training programme

6.1 Definition

The gynaecological oncologist is a specialist in Obstetrics and Gynaecology who, in addition, is able to:

- Provide consultation on and comprehensive management of patients with or at risk for gynaecological cancer.
- Manage the medical and /or surgical treatment of malignant diseases of the female genital tract* that may involve relevant surgery of abdominal organs.
- Practice gynaecological oncology in an institutional setting where all effective forms of cancer therapy are available. This includes comprehensive management of gynaecological cancer, including screening, diagnostic, psycho-oncological care, therapeutic procedures, and follow up.

The practice of Gynaecology Oncology excludes training and practice in another subspecialty.

* Only in countries where it is part of gynaecological practice will breast cancer treatment also be part of the tasks of the gynaecological oncologist. In the EU, gynaecologists are usually responsible for treating breast diseases, except in (notably) Denmark, Finland, Ireland, the Netherlands, and the UK. However, training in breast cancer care is not part of this Curriculum and will not be reviewed at accreditation or certification.

6.2 Aim of the training

To educate gynaecologists so that they can fully provide and improve the care of patients with gynaecological malignancies in collaboration with other care providers.

6.3 Objectives of training

To train a subspecialist to be capable of:

- consultation, practice, and comprehensive care of women with gynaecological cancer;
- interpretation of scientific data to improve knowledge and to apply these in clinical care, teaching, research, and audit;
- co-ordinating and promoting collaboration in organising the service; and
- providing leadership in development and in research within the subspecialty.

6.4 Organisation of training

The number of subspecialists should be strictly controlled by the relevant national body in order to provide sufficient expertise.

The training programme must be in a multidisciplinary accredited centre and should be organised by an accredited subspecialist (as outlined in the criteria for centres, §4.2).

Training follows modules (see chapter 7. The ESGO Curriculum partly follows and incorporates content of the already existing RCOG Gynaecological Oncology Curriculum 2013, to which it is indebted). These may partly be completed outside the defined fellowship training programme in elective European-accredited modules, e.g., as part of the general training.

The training centre should use guidelines and protocols finalised by national professional bodies reviewed at regular intervals. These guidelines will define cases for which it is necessary to refer a patient to a subspecialist.

6.5 Means of training

An adequately remunerated post in a recognised training programme is a basic condition. Each trainee must have an appointed Educational Supervisor as a tutor for guidance and advice.

The estimated number of training post(s) should reflect the national need for subspecialists in gynaecology oncology as well as the facilities and finances available for specialist training and is limited by the criteria set within this ESGO Curriculum.

Trainees should participate in all relevant activities of the training unit, such as the care of outpatients and inpatients, on-call duties during both day and night, performing gynaecological oncology operations, and participating in educational activities, including teaching other health professionals. Participation in audit, research (clinical or basic), and patient advocacy activities is equally essential.

Arrangements for postgraduate training must be compatible with national employment legislation in relation to remuneration, hours of work, and rights of employees in such matters as sick leave, maternal and paternal leave, and compulsory military service.

Surgical training needs to be systematic, stepwise, and modular, following the deconstruction of procedures (examples on ESGO's website under 'Surgical steps in oncological procedures'), progressively exposing the fellow to the performance of complex procedures. In other words, the trainee should not immediately be expected to perform an entire procedure according to the 'just continue until you get stuck' method. Instead, at each consecutive procedure, the trainee will perform one or more steps more, after which the supervisor takes over, and the trainees continue to assist.

Minimal invasive surgery is part of the armamentarium of the gynaecological oncologist. At the end of training, a gynaecological oncologist should be able to perform independently at least selected radical procedures, e.g., pelvic lymph node dissection.

Advanced simulation training (virtual, animal model, cadaver) is a prerequisite for training in *both* complex *open* and *minimally invasive* procedures. The list of courses in which the fellow participated must be provided in the logbook together with copies of the certificates of attendance.

6.6 Duration of training

The training includes *a minimum of two (2) and at the most three (3) clinical years of full-time equivalent (FTE) training* according to a prospectively approved programme in an ESGO-accredited Gynaecological Oncology unit.

Modules of another specialty (e.g., radiotherapy, medical oncology, surgery) may be followed for up to six (6) months within the fellowship programme.

The portfolio must be completed within four (4) years after the formal start of training. Retrospective fulfilment of the criteria, e.g., completion of the portfolio over years of oncological practice without a registered and defined training programme, is not allowed.

The ESGO exam must be passed within six (6) years from the formal start of training.

7. Modules

7.1 Organ-specific modules

Clinical training covers the disease-specific areas outlined in the following modules.

(For the meaning of the colour scheme used in the schematic overviews, please consult matrix 11.2)

7.1.1 Gestational trophoblastic disease (GTD)

Learning outcomes:

- Understand and demonstrate appropriate knowledge, skills, and attitude in relation to managing patients with the diagnosis of presumed trophoblastic disease.
- Perform initial assessment and interpretation of investigational results of suspected GTD.
- Plan subsequent management of GTD.
- Perform appropriate gynaecological diagnostic procedures.
- Appropriately interpret investigation results.
- Communicate with the MDT and organise appropriate treatment.
- Plan and execute the appropriate monitoring and follow-up.

Knowledge criteria	Clinical competency	Professional skills and attitudes	Training support	Evidence/ assessment
Aetiology, epidemiology and clinical presentation of GTD	Counsel patients and relatives about: - diagnosis and prognosis - treatment options	Ability to empathetically explain the (suspicion of) diagnosis of GTD	Observation of, assisting and discussion with senior staff	Direct observation of clinical practice by trainers
Pathology of GTD	- importance of close monitoring - interpretation of monitoring results	Ability to discuss the diagnosis and treatment options clearly and openly, including the need of timely treatment.	Attendance and participation in multidisciplinary meetings	OSATS
Clinic-pathological classification of GTD	Discuss result treatment and consequences for follow-up	Ability to discuss the vital prognosis as well as the prognosis for future fertility	Attendance of special interest meetings	Mini-CEX
Knowledge of diagnostic work-up including recognising suspicion on basis of results of non-targeted diagnostic procedures.	Perform appropriate surgical treatment Give or organise appropriate and timely chemotherapy	Ability to appropriately classify and stage the disease.	Personal study	Case-based discussions
Indication, timing, nature, risks and alternatives of initial surgical and medical treatment	Ensure appropriate human Chorionic Gonadotrophin (hCG)-monitoring	Ability to choose the appropriate treatment	Postgraduate courses	Chemotherapy module
Multidisciplinary team meeting discussions and management planning		Organise and check appropriate hCG-monitoring	Attend medical oncology sessions (in- and outpatient)	Logbook
Monitoring by means of hCG-follow up and interpretation of these data				
Diagnosis of trophoblastic neoplasia (GTN) and treatment planning				

Schematic overview of required competence levels per stage of training in the gestational trophoblastic disease module

Medical skills		Competence level Per stage of training			Number At levels 4-5
		<i>Core</i>	<i>Elective</i>	<i>Fellowship</i>	
<i>Module</i>	<i>Learning target</i>				
GTD	Recognition and diagnosis of GTD/GTN	3	4	5	
	Surgical and medical treatment of GTD	3	4	5	
	Treatment plan for GTN	1	3	5	

7.1.2 Ovarian and tubal cancer

Learning outcomes:

- Understand and demonstrate appropriate knowledge, skills, and attitude in relation to managing patients with the diagnosis of ovarian and tubal cancer.
- Perform an initial clinical assessment of the patient and interpretation of imaging modalities and laboratory exams.
- Plan subsequent management (either primary debulking surgery or referral for neoadjuvant chemotherapy).
- Perform appropriate gynaecological diagnostic procedures, including laparoscopy.
- Appropriately interpret investigational results.
- Present the case to the MDT and organise appropriate treatment.
- Plan and execute the appropriate monitoring and follow-up in collaboration with the medical oncologists.

Knowledge criteria	Clinical competency	Professional skills and attitudes	Training support	Evidence/assessment
Aetiology, epidemiology and clinical presentation of ovarian and tubal cancer	Counsel patients and relatives about: - diagnosis and prognosis - treatment options	Ability to empathetically explain the diagnosis of ovarian and tubal cancer	Observation and assistance of and discussion with senior staff	Direct observation of clinical practice by trainers
Cancer genetics	- importance of follow-up regarding recurrences	Ability to clearly and openly discuss the diagnosis and treatment options as well as the intraoperative and postoperative complications at the time of debulking	Attendance and participation in multidisciplinary meetings	OSATS
Pathology of ovarian and tubal cancer	- interpretation of monitoring results	Ability to discuss the vital prognosis as well as the prognosis for future fertility	Participation in debulking procedures (upfront or interval debulking) with increasing level of difficulty	Mini-CEX
Staging of ovarian and tubal cancer	Discuss result treatment and consequences for follow-up	Ability to appropriately classify and stage the disease	Attendance of special interest meetings	Case-based discussions
Knowledge of diagnostic work-up including laparoscopy for defining the extent of the disease	Perform appropriate surgical treatment	Ability to choose the appropriate treatment	Knowledge about targeted therapies in ovarian and tubal cancer	Logbook
Indication, timing, nature, risks ,and alternatives of initial surgical and medical treatment	Give or organise appropriate and timely chemotherapy (collaboration with medical oncologists)	Ability to perform and interpret ultrasound examination for diagnosis and assessment of pelvic and abdominal disease	Attend medical oncology sessions regarding chemotherapy (neoadjuvant, 1 st line, 2 nd line, etc.)	
Multidisciplinary team meeting discussions and management planning	Ensure appropriate follow-up	Ability to perform ultrasound-guided paracentesis		
Monitoring by means of CT scans and tumour markers—follow up and interpretation of these data		Ability to perform (ultra-)radical surgery		
Diagnosis of ovarian and tubal cancer and treatment planning				

Schematic overview of required competence levels per stage of training in ovarian and tubal cancer module

Medical skills		Competence level Per stage of training			Number At levels 4–5
		<i>Core</i>	<i>Elective</i>	<i>Fellowship</i>	
<i>Module</i>	<i>Learning target</i>				
Ovarian & tubal cancer	Diagnostic and therapeutic plan	3	4	5	
	Systematic use of US and tumour markers	1	3	5	
	Surgical radical treatment	1	2	5	30
	Organise MDT	1	3	5	
	Follow-up	2	3	5	

7.1.3 Uterine cancer

Learning outcomes:

- Understand and demonstrate appropriate knowledge, skills, and attitude in relation to managing patients with the diagnosis of uterine cancer, including Endometrial Carcinoma (EC) and Uterine Sarcoma (US).
- Perform the initial assessment and interpretation of the investigational results of EC and US.
- Plan subsequent management of EC and US.
- Perform appropriate gynaecological diagnostic procedures.
- Appropriately interpret investigational results.
- Communicate with the MDT and organise appropriate treatment.
- Plan and execute the appropriate monitoring and follow-up.

Knowledge criteria	Clinical competency	Professional skills and attitudes	Training support	Evidence/assessment
Aetiology, epidemiology, clinical presentation, and risk factors of UC	Counsel patients and relatives about: - risk factors - genetic association - diagnosis and prognosis - treatment options - interpretation of monitoring results	Ability to empathetically explain the (suspicion of) diagnosis of UC	Observation and assistance of and discussion with senior staff	Direct observation of clinical practice by trainers
Pathology of US (endometrial stromal sarcoma and leiomyosarcoma)	Discuss diagnostic, pre-treatment staging, first treatment strategy, and adjuvant treatments	Ability to clearly and openly discuss the diagnosis, prognosis, and treatment options, including genetic counselling	Attendance and participation in MDT meetings	OSATS Mini-CEX
Clinico-pathological classification of EC including molecular subtypes and genomic pathways	Adequate lecture and interpretation of imaging tests as TC, MRI, and PET-TC	Ability to discuss the vital prognosis as well as the possibility, symptoms, and location of recurrences	Attendance and participation in surgical treatments by different approaches	Case-based discussions Chemotherapy module
Genetics association and syndrome (i.e., Lynch). Genetic counselling for patient and family. Other associated tumours and prevention screening programs (i.e., colo-rectal disease)	Perform appropriate surgical treatment by the best possible approach (vaginal, laparotomy, laparoscopy, or robotics) including procedures: - Hysterectomy - Pelvic and aortic lymphadenectomy - Sentinel node detection - Omentectomy - Cytoreduction	Ability to appropriately classify and stage the disease	Personal study Postgraduate courses	Radiotherapy module Surgical modules
Knowledge of diagnostic work-up on US including recognising suspicion masses during myoma assessment and management	Appropriately manage surgical staging and histological risk factors	Ability to choose the appropriate treatment	Attend medical oncology sessions (in- and outpatient)	Cancer genetic module Logbook
Knowledge of diagnostic work-up of different subtypes EC (morphological and molecular classification)	Organise appropriate and timely adjuvant treatment (radiotherapy and/or chemotherapy)	Organise and check appropriate follow-up		
Indication, timing, nature, risks, and alternatives of initial surgical and medical treatment				
Multidisciplinary team meeting discussions and management planning				

Knowledge criteria	Clinical competency	Professional skills and attitudes	Training support	Evidence/assessment
Appropriate follow-up by imaging and tumour markers and interpretation of these data Diagnosis and treatment plan for recurrences	Ensure appropriate follow-up schedule and explorations (including imaging)			

Schematic overview of required competence levels per stage of training in the uterine cancer module

Medical skills		Competence level Per stage of training			Number At levels 4-5
<i>Module</i>	<i>Learning target</i>	<i>Core</i>	<i>Elective</i>	<i>Fellowship</i>	
Uterine cancer	Diagnostic and therapeutic plan	3	4	5	
	Surgery for low-risk cancer	2	4	5	
	Radical surgery for high-risk cancer	1	2	5	
	Weighing treatment options and morbidity	2	3	5	
	Fertility-sparing treatment	1	1	4	

7.1.4 Cervical cancer

Learning outcomes:

- Understand and demonstrate appropriate knowledge, skills, and attitude in relation to managing patients with a diagnosis of cervical cancer (CC).
- Perform initial assessment and interpretation of investigational results of CC.
- Plan subsequent management of CC.
- Perform appropriate gynaecological diagnostic procedures.
- Appropriately interpret investigational results.
- Communicate with the MDT and organise appropriate treatment.
- Plan and execute the appropriate monitoring and follow-up.

Knowledge criteria	Clinical competency	Professional skills and attitudes	Training support	Evidence/assessment
Aetiology, epidemiology, clinical presentation, and risk factors of CC	Counsel patients and relatives about: - risk factors - HPV association and vaccination	Ability to empathetically explain the (suspicion of) diagnosis of CC and HPV-related concerns	Observation and assistance of and discussion with senior staff	Direct observation of clinical practice by trainers
Clinico-pathological classification of CC and HPV implications	- diagnosis and prognosis - treatment options - interpretation of monitoring results	Ability to clearly and openly discuss the diagnosis, prognosis, and treatment options, including fertility counselling	Attendance and participation in multidisciplinary meetings	OSATS Mini-CEX
Prevention and screening programs (including HPV detection and vaccination)	Discuss result treatment and consequences, including fertility-sparing possibilities	Ability to discuss the vital prognosis as well possibility, symptoms, and location of recurrences	Attendance and participation in surgical treatments by different approaches	Case-based discussions Chemotherapy module
Knowledge of diagnostic work-up on colposcopy and management of premalignant disease	Discuss diagnostic, pre-treatment staging, first treatment strategy, and adjuvant treatments	Ability to appropriately classify and stage the disease	Personal study	Radiotherapy module
Knowledge of diagnostic work-up and presurgical staging (including sonography and other imaging tests)	Adequate lecture and interpretation of sonography and other imaging tests as TC, MRI, and PET-TC	Ability to choose the appropriate treatment strategy and surgical approach	Postgraduate courses	Surgical modules Logbook
Indication, timing, nature, risks, and alternatives of initial surgical and medical treatment	Perform appropriate surgical treatment by the best possible approach (vaginal, laparotomy, laparoscopy, or robotics) including procedures: - conisation - trachelectomy	Organise and check appropriate follow-up	Attend medical oncology sessions (in- and outpatient)	
Multidisciplinary team meeting discussions and management planning	- radical hysterectomy (different subtypes) - pelvic and aortic lymphadenectomy - sentinel node detection - exenteration			
Appropriate follow-up by imaging and tumour markers and interpretation of these data				
Diagnosis and treatment plan for recurrences (including possibility of exenteration)	Appropriately manage surgical staging and histological risk factors			

Knowledge criteria	Clinical competency	Professional skills and attitudes	Training support	Evidence/assessment
	Organise appropriate and timely adjuvant treatment (radiotherapy and/or chemotherapy) Ensure appropriate follow-up schedule and explorations (including imaging)			

Schematic overview of required competence levels per stage of training in the cervical cancer module

Medical skills		Competence level Per stage of training			Number At levels 4-5
<i>Module</i>	<i>Learning target</i>	<i>Core</i>	<i>Elective</i>	<i>Fellowship</i>	
Cervical cancer	Knowledge of prevention	3	4	5	
	Colposcopy	1	4	3	
	Diagnostic and therapeutic plan	3	3	5	
	Surgical (radical) treatment	1	2	5	

7.1.5 Vaginal cancer

Learning outcomes:

- Understand and demonstrate appropriate knowledge, skills, and attitude in relation to managing patients with the diagnosis of vaginal cancer (VC).
- Perform initial assessment and interpret investigational results of VC.
- Plan subsequent management of VC.
- Perform appropriate gynaecological diagnostic procedures.
- Appropriately interpret investigational results.
- Communicate with the MDT and organise appropriate treatment.
- Plan and execute the appropriate monitoring and follow-up.

Knowledge criteria	Clinical competency	Professional skills and attitudes	Training support	Evidence/ assessment
Aetiology, epidemiology, clinical presentation, and risk factors of VC	Counsel patients and relatives about: - risk factors - HPV association and vaccination	Ability to empathetically explain the (suspicion of) diagnosis of VC and HPV-related concerns or rare histological subtypes	Observation and assistance of and discussion with senior staff	Direct observation of clinical practice by trainers
Clinico-pathological classification of VC including rare tumours as Clear Cell Carcinoma or Botryoides Sarcoma	- diagnosis and prognosis - treatment options - interpretation of monitoring results	Ability to clearly and openly discuss diagnosis, prognosis, and treatment options, including fertility counselling	Attendance and participation in multidisciplinary meetings	OSATS Mini-CEX Case-based discussions
Prevention and screening programs (including HPV detection and vaccination)	Discuss result treatment and consequences, including fertility-sparing possibilities.	Ability to discuss the vital prognosis as well as the possibility, symptoms, and location of recurrences	Attendance and participation in surgical treatments by different approaches	Chemotherapy module Radiotherapy module
Knowledge of diagnostic work-up on vaginoscopy and management of premalignant disease	Discuss diagnostic, pre-treatment staging, first treatment strategy, and adjuvant treatments	Ability to appropriately classify and stage the disease	Personal study	Surgical modules
Knowledge of diagnostic work-up and presurgical staging (including sonography and other imaging tests)	Adequate lecture and interpretation of sonography and other imaging tests as TC, MRI, and PET-TC	Ability to choose the appropriate treatment strategy with or without surgical approach	Postgraduate courses	Plastic and reconstructive surgery
Indication, timing, nature, risks, and alternatives of initial surgical and medical treatment	Perform appropriate surgical treatment by the best possible approach (vulvo-vaginal or abdominal)	Organise and check appropriate follow-up	Attend medical oncology sessions (in- and outpatient)	Logbook
Multidisciplinary team meeting discussions and management planning	Appropriately manage surgical staging and histological risk factors			
Appropriate follow-up by imaging and tumour markers and interpretation of these data	Organise appropriate and timely primary and adjuvant treatment (radio/chemotherapy or surgery)			

Knowledge criteria	Clinical competency	Professional skills and attitudes	Training support	Evidence/ assessment
Diagnosis and treatment plan for recurrences (including the possibility of exenteration)	Ensure appropriate follow-up schedule and explorations (including imaging)			

Schematic overview of required competence levels per stage of training in the vaginal cancer module

Medical skills		Competence level Per stage of training			Number At levels 4-5
<i>Module</i>	<i>Learning target</i>	<i>Core</i>	<i>Elective</i>	<i>Fellowship</i>	
Vaginal cancer	Diagnostic and therapeutic plan	1	3	4	
	Radical surgical treatment	1	1	4	

7.1.6 Vulvar cancer

Learning outcomes:

- Understand and demonstrate appropriate knowledge, skills, and attitude in relation to managing patients with a diagnosis of vulvar cancer.
- Perform an initial clinical assessment of the patient and interpret imaging modalities and laboratory exams.
- Plan subsequent management (upfront surgery for the early stages, combined chemoradiation for advanced stages).
- Perform appropriate gynaecological diagnostic procedures, including biopsies of the lesion/s.
- Appropriately interpret the investigational results.
- Present the case to the MDT and organise appropriate treatment.
- Appropriately implement sentinel lymph node procedure in cases of early-stage disease.
- Plan and execute the appropriate monitoring and follow-up.

Knowledge criteria	Clinical competency	Professional skills and attitudes	Training support	Evidence/assessment
Aetiology, epidemiology, and clinical presentation of vulvar cancer	Counsel patients and relatives about: - diagnosis and prognosis - treatment options - importance of follow-up regarding recurrences - interpretation of monitoring results	Ability to empathetically explain the diagnosis of vulvar cancer	Observation and assistance of and discussion with senior staff	Direct observation of clinical practice by trainers
Pathology of vulvar cancer		Ability to clearly and openly discuss the diagnosis and treatment options, as well as the intraoperative (and, most importantly) the postoperative complications following surgery	Attendance and participation in multidisciplinary meetings	OSATS
Staging of vulvar cancer		Ability to discuss the vital prognosis	Participation in performing SLN procedures, inguofemoral lymph node dissection, and all the radical procedures for vulvar cancer	Mini-CEX
Knowledge of diagnostic work-up in order to decide on the treatment	Discuss result treatment and consequences for follow-up	Ability to appropriately classify and stage the disease	Attendance of special interest meetings	Case-based discussions
Indication, timing, nature, risks, and alternatives of initial surgical treatment or upfront chemoradiation	Perform appropriate surgical treatment	Ability to choose the appropriate treatment	Knowledge about targeted therapies in vulvar cancer	Logbook
Multidisciplinary team meeting discussions and management planning	Organise, in collaboration with the radiotherapists, appropriate and timely adjuvant radiation treatment according to prognostic factors following surgery	Ability to perform clinical examination for the diagnosis of enlarged inguofemoral lymph nodes	Participation in the reconstruction of the vulva performed by the plastic surgeons following ultraradical surgeries	
Monitoring by means of CT scans—follow-up and interpretation of these data	Ensure appropriate follow-up	Ability to implement the sentinel lymph node procedure in early-stage disease		

Knowledge criteria	Clinical competency	Professional skills and attitudes	Training support	Evidence/assessment
Diagnosis of vulvar cancer and treatment planning		Ability to perform bilateral inguinofemoral lymph node dissection, wide local excision, radical hemivulvectomy, and radical vulvectomy		

Schematic overview of required competence levels per stage of training in the vulvar cancer module

Medical skills		Competence level Per stage of training			Number At levels 4-5
<i>Module</i>	<i>Learning target</i>	<i>Core</i>	<i>Elective</i>	<i>Fellowship</i>	
Vulvar Cancer	Diagnostic and therapeutic plan	3	4	5	
	Description and drawing of vulvar situation (disease mapping)	2	4	5	
	Excision biopsy	3	4	5	
	Local excision	1	4	5	
	Radical surgery for vulvar cancer	1	2	5	

7.2 Generic modules

In addition to covering each of the specific gynaecological oncological diseases and their (surgical) treatment, the fellowship program should include instruction in the areas outlined in the following modules.

7.2.1 Peri-operative care

Learning objectives:

- Understand and demonstrate appropriate knowledge, skills, and attitudes in relation to patients undergoing surgery for gynaecological malignancies:
 - plan appropriate surgery;
 - identify surgical and anaesthetic risks;
 - prepare patients for surgery;
 - manage pre-, intra- and postoperative complications;
 - advise on nutrition and total parenteral nutrition (TPN).

Knowledge criteria	Clinical competency	Professional skills and attitudes	Training support	Evidence/assessment
Type of surgery appropriate for each gynaecological cancer (see separate modules)	Counsel patients regarding diagnosis, management, and risks of treatment	Ability to interpret preoperative investigations and liaise with the anaesthetic department	Direct supervision from senior colleagues	Logbook
Fluid and electrolyte balance Elemental feeding and TPN	Recognise and manage intraoperative complications	Ability to counsel patients regarding treatment options	Attendance at MDT meetings	Multidisciplinary team attendance
ERAS principles of fast recovery	Postoperative care and managing complications	Ability to select and perform appropriate surgical management of gynaecological cancer according to patient's needs	Ward attendance	Course assessment OSATS Mini-CEX
	Manage the following clinical problems:	Ability to manage postoperative care and complications thereof	Supervision in operating theatre	Case-based discussions
	Intraoperative: <ul style="list-style-type: none"> - haemorrhage - bowel resection - unexpected finding - inoperability 	Ability to counsel patients and relatives regarding diagnosis and investigations and discuss treatment options with the advantages and disadvantages of each	Intensive care and high-dependency unit ward rounds	Audit of complications
	Postoperative: <ul style="list-style-type: none"> - thrombosis - infection - bowel obstruction 	Ability to convey decisions of the MDT to patients and relatives, including prognosis and palliative care		
	Inform patient of results	Ability to liaise with colleagues and other health professionals regarding coordinating investigations and management strategies pertinent to individual patients		
	Appropriately order and interpret haematological investigations			
	Manage fluid balance perioperatively			
	Order and supervise appropriate thromboprophylaxis			
	Liaise with nutritional support team			

Knowledge criteria	Clinical competency	Professional skills and attitudes	Training support	Evidence/assessment
	<p>Decide when TPN or enteral feeding is appropriate.</p> <p>Have knowledge of the principles of fast recovery and how to apply them</p>	<p>Ability to order and interpret:</p> <ul style="list-style-type: none"> - fluid balance - blood investigations: U&E, FBC, LFT <p>Ability to prescribe thromboprophylaxis</p> <p>Ability to assess patient and establish when enteral feeding or TPN is required</p> <p>Competently deal with vascular, bowel, and urinary tract injury.</p> <p>Ability to use discretion, recognise their own limitations, and summon help from other specialties when needed</p>		

Schematic overview of required competence levels in peri-operative care per stage of training

Medical skills		Competence level Per stage of training			Number At levels 4-5
Module	Learning target	Core	Elective	Fellowship	
Peri-operative care	Knowledge and application of ERAS principles	1	4	5	

7.2.2 Gynaecology oncological surgery, including general and colorectal surgery

Learning outcomes:

- Achieve surgical skills appropriate for a subspecialist gynaecological oncology surgeon:
 - anatomical knowledge;
 - surgical skills;
 - personal audit.

Knowledge criteria	Clinical competency	Professional skills and attitudes	Training support	Evidence/assessment
Anatomy of the female abdomen and pelvis, including blood supply, lymphatic drainage, nervous system, and the course of the ureter	Surgical diagnosis and management of gynaecological cancers: <ul style="list-style-type: none"> - ovary - endometrium - cervix - vulva - vagina - fallopian tube 	Ability to perform hysterectomy (open and laparoscopically)	Observation of assisting and discussion with senior staff	Logbook of competences and experience
Anatomy and physiology of gastrointestinal tract	Liaison with surgical colleagues for assistance in complicated cases	Ability to perform radical hysterectomy (open and laparoscopically)	Direct and indirect surgical supervision of surgical skills to appropriate competency by surgical staff	OSATS Mini-CEX
Pathophysiology of intestinal function	Perform rigid sigmoidoscopy	Ability to perform pelvic lymph node dissection (open and laparoscopically)	Specific task training and supervision	Case-based discussions Surgical logbook Audit of complications
Care of a critically ill patient	Counsel patients preoperatively and postoperatively regarding bowel surgery and stoma management, including benefits, risks, and complications	Ability to perform para-aortic lymph node dissection (open)	Appropriate postgraduate course	
Principles of surgery of gastrointestinal tract, including exposure handling and injury to tissues	Perform laparotomy and identify abnormalities throughout the abdominal cavity, including liver, spleen, omentum, appendix, peritoneum, pancreas, and large and small bowel	Ability to perform infrasonic and supracolic omentectomy	Colorectal outpatient clinic	
Principles of resection and repair of intestinal tissues: <ul style="list-style-type: none"> - primary repair - secondary repair <ul style="list-style-type: none"> - ileostomy - colostomy 	Suture serosal injury to bowel	Ability to perform peritoneal stripping	Attend intensive care unit ward rounds	
Indications to perform bowel surgery in a gynaecological oncology setting	Repair mucosal injury to small bowel	Ability to perform fine-needle aspiration or biopsy of superficial lymph node	Attend dietician ward rounds	
Use of radiology in investigation and management of gastrointestinal tract disorders		Ability to perform Tru-cut biopsy	Observation and assisting senior staff	
Appropriate selection of patients who will benefit from bowel surgery		Ability to perform (with the assistance of surgical colleagues if necessary): <ul style="list-style-type: none"> - exonerative surgery - urinary diversion procedures <ul style="list-style-type: none"> - splenectomy - bowel resection - ileostomy/colostomy - diaphragmatic resection / mobilisation of the liver - panniculectomy 	Senior staff supervision Colorectal attachment (4 weeks)	
		Ability to perform partial vaginectomy (vaginal and abdominal approach) and radical excision of the vagina	Surgical anastomosis course	
		Ability to organise anterior, posterior, and total exenteration, including leading the surgical procedure	Attendance with soma therapist	
		Ability to initiate discussion of management at MDT meeting		

Knowledge criteria	Clinical competency	Professional skills and attitudes	Training support	Evidence/assessment
Preoperative preparation required for a patient who may or will have bowel surgery	<p>Select area to be resected and perform primary anastomosis of small bowel</p> <p>Select area for and perform ileostomy</p> <p>Perform appendicectomy</p> <p>Select appropriate tissue and resect large bowel with formation of colostomy</p> <p>Mark stoma site appropriately</p> <p>Order and interpret appropriate investigations preoperatively</p> <p>Order appropriate bowel preparation preoperatively</p> <p>Select patients preoperatively and intraoperatively who will benefit from bowel surgery</p>	<p>Ability to perform sigmoidoscopy</p> <p>Ability to counsel patient regarding bowel surgery and stoma management, including preoperatively</p> <p>Ability to select and mark stoma site</p> <p>Ability to independently practice exploratory abdominal procedure</p> <p>Ability to independently practice bowel surgery, including:</p> <ul style="list-style-type: none"> - suture serosa - repair small bowel injury - resect and reanatomose small bowel - appendicectomy - ileostomy - colostomy - resection of large bowel <p>Have experience of the following (independent practice is not essential and limits of practice will depend upon support available and experience):</p> <ul style="list-style-type: none"> - primary anastomosis of large bowel - abdominal perineal resection 		

Schematic overview of required competence levels per stage of training in the gynaecological oncological surgery module

Medical skills		Competence level			Number At levels 4-5
		Per stage of training			
Module	Learning target	Core	Elective	Fellowship	
GENERIC					
Gynaecological oncological surgery	Gynaecological oncological anatomical knowledge	2	4	5	
	Recognition and treatment of surgical complications	1	4	5	
	Specific surgical skills:				
	- hysterectomies for uterine cancer	2	4	5	
	- radical hysterectomies	1	2	5	10
	- radical trachelectomy	1	1	3	

Medical skills		Competence level			Number At levels 4-5
		Per stage of training			
Gynaecological oncological surgery	- pelvic lymph node dissection (open)	1	3	5	30
	- pelvic lymph node dissection (laparoscopically)	1	3	5	
	- lumbo-aortic lnd (open)	1	1	5	10
	- lumbo-aortic lnd (laparoscopically)	1	1	4	
	- local wide excision vulva	1	2	5	5
	- inguino-femoral lnn evaluation	1	2	4	10
	- (radical) colpectomy	1	1	4	
	- creation neovagina	1	1	3	
	- infra+supracolic omentectomy	1	3	5	
	- cytoreductive surgeries	1	2	5	30
	- laparoscopic assessment of ovarian cancer	1	2	5	
	- laparoscopic insertion IP catheter	1	2	4	
	- exenterations	1	1	4	
	- LLETZ/LEEP of cervix	2	4	3	
	- enterostomy	1	2	3	
	- cytologic biopsy (FNA)	2	3	5	
	- histologic biopsy (Tru-cut)	1	3	5	

7.2.3 Systemic therapy (including pharmacology)

Learning outcomes:

- Have basic knowledge of tumour biology and immunology (kinetics of cell cycle and cancer cell growth).
- Have detailed knowledge of the pharmacological properties of drugs commonly used in gynaecological oncology.
- Have detailed knowledge of different intents, lines, and routes of chemotherapy, immunotherapy, and targeted therapy and its combination with other treatment modalities (surgery, radiotherapy).
- Have appropriate knowledge of indications and adverse effects of chemotherapy and selected targeted treatments in the management of gynaecological cancers (endocrine therapy, targeted therapies, immunotherapy).
- Communicate with the MDT and select the appropriate systemic treatment for gynaecological cancers.
- Demonstrate adequate skills and attitude to counsel patients, plan systemic treatments, and assess response in gynaecological cancers.
- Have updated knowledge and an appropriate interpretation of clinical trials in gynaecological oncology.
- Participate in the planning and execution of updated algorithms for the systemic treatment of gynaecological cancers.

Knowledge criteria	Clinical competency	Professional skills and attitudes	Training support	Evidence/ assessment
Tumour biology: - cell cycle kinetics - kinetics of normal and cancer cell growth	Collect an appropriate medical history	Ability to select the most appropriate systemic treatment for gynaecological cancers according to disease and patient characteristics	Observation and assistance of and discussion with senior staff	Direct observation of clinical practice by trainers
Classes of antineoplastic drugs and their mechanisms of action	Perform a clinical examination		Specific topic training and supervision	OSATS
Pharmacological properties of drugs commonly used in gynaecological oncology	Prescribe and plan a systemic treatment	Ability to discuss in a multidisciplinary team the most appropriate systemic treatment for each patient	Attendance and participation in multidisciplinary meetings	Mini-CEX
Different intents and lines of chemotherapy: - adjuvant - neo adjuvant - first-line - second-line	Counsel patients and relatives about: - prognosis - treatment options - basics of a systemic treatment - adverse effects	Adequate skills and attitude to counsel patients, plan systemic treatments, and assess response	Attendance of special interest meetings	Case-based discussions
Routes of administration	Assess the response to systemic treatments		Personal study	Logbook
Combination of chemotherapy with other treatment modalities (surgery, radiotherapy)	Monitor and manage the potential toxicities of each systemic treatment	Ability to investigate, recognise, and manage the toxicity of systemic treatments	Postgraduate courses	
Indications and adverse effects of chemotherapy in the management of gynaecological cancers	Modify and change the current systemic treatment according to response and toxicities	Ability to discuss with patients the results of systemic treatment	Training period in a Medical Oncology department	
Indications and adverse effects of endocrine therapy in the management of gynaecological cancers		Ability to counsel patients about clinical trials		

Knowledge criteria	Clinical competency	Professional skills and attitudes	Training support	Evidence/assessment
Indications and adverse effects of targeted therapies in the management of gynaecological cancers Indications and adverse effects of immunotherapy in the management of gynaecological cancers Dose calculation and scheduling Response evaluation criteria Principles of phase I, II, and III clinical trials Update on clinical trials in gynaecological oncology		Ability to participate in planning and execute updated algorithms for the systemic treatment of gynaecological cancers		

Schematic overview of required competence levels per stage of training in the systemic therapy module

Medical skills		Competence level Per stage of training			Number At levels 4-5
<i>Module</i>	<i>Learning target</i>	<i>Core</i>	<i>Elective</i>	<i>Fellowship</i>	
Systemic therapy	Pharmacological knowledge of cytostatic agents	1	2	4	
	Knowledge of indications	1	3	5	
	Acquaintance with clinical trials	1	3	5	

7.2.4 Urologic surgery

Learning outcomes:

- Understand the impact of gynaecological cancer and its treatment in the renal tract.
- Have an awareness of possible urological complications.
- Identify and manage urological complications.

Knowledge criteria	Clinical competency	Professional skills and attitudes	Training support	Evidence/ assessment
<p>Anatomy and physiology of kidney, ureter, bladder, and urethra</p> <p>Effects of gynaecological malignancy upon the urinary tract</p> <p>Effects of treatment for gynaecological malignancy on urinary tract, e.g. radical surgery, radiotherapy</p> <p>Communication with patients and family about the effects of gynaecological malignancy and treatments on urinary system, e.g. fistula, obstruction, bladder disorders</p> <p>Interpret investigations ordered</p> <p>Recognition and management of injury to urinary tract</p> <p>Principles of repair of injury to:</p> <ul style="list-style-type: none"> - ureter - bladder - urethra <p>Selection of patients who would benefit from intervention surgery involving the urinary tract, e.g., urethral stenting, fistula repair, exenterative surgery</p> <p>Pre- and postoperative care of patients undergoing urology procedure</p>	<p>Ability to appropriately investigate and diagnose disorders of the urinary tract in a gynaecological cancer setting</p> <p>Appropriate ordering of investigation and liaison with urology team</p> <p>Investigation of diseases of urinary tract:</p> <ul style="list-style-type: none"> - urine (microscopy, culture, and sensitivity; biochemistry) - haematology - ultrasound - x-ray - magnetic resonance imaging - cystoscopy - ureteroscopy <p>Knowledge of damage to ureter and bladder due to disease process or surgery, e.g. fistula, obstruction, surgical injury</p> <p>Perform:</p> <ul style="list-style-type: none"> - Cystoscopy - Repair to bladder <p>Dissection of ureter</p>	<p>Effectively manage patients with suspected urinary tract disorders</p> <p>Order and interpret investigations of the urinary tract</p> <p>Appropriate selection of patients for intervention surgery involving the urinary tract</p> <p>Ability to independently practice the following surgical procedures:</p> <ul style="list-style-type: none"> - insertion of suprapubic catheter - cystoscopy - surgical repair of bladder injury - straightforward repair of minor ureteric damage <p>Have experience of the following (independent practice is not essential and limits of practice will depend upon the support available and experience):</p> <ul style="list-style-type: none"> - ureteroscopy - repair of ureter - ureteric reimplantation - primary anastomosis of ureter - cystectomy - ileal conduit - continent urinary diversion - insertion of ureteric stent 	<p>Work under senior supervision</p> <p>Complete a joint clinics Radiotherapy module</p> <p>Attendance at urodynamic clinic</p> <p>Attend both gynaecology and urology MDT</p> <p>Attend the radiology department</p> <p>Complete a Urology module (minimum 10 sessions)</p>	<p>Logbook</p> <p>Mini-CEX</p> <p>Case-based discussions</p>

Schematic overview of required competence levels per stage of training in the urologic surgery module

Medical skills		Competence level Per stage of training			Number At levels 4-5
		<i>Core</i>	<i>Elective</i>	<i>Fellowship</i>	
<i>Module</i>	<i>Learning target</i>				
Urologic surgery	- urinary deviation	1	1	2	
	- recognition and dissection of the ureter	2	4	5	

7.2.5 Palliative care and supportive care

Learning outcomes:

- Understand and demonstrate appropriate knowledge, skills, and attitude in relation to managing patients with terminal disease because of gynaecological cancer.
- Be able to clinically assess and evaluate the condition of the patient.
- Plan subsequent appropriate supportive care.
- Perform appropriate exams to decide whether the patient is a candidate for subsequent chemotherapy or not.
- Appropriately interpret the patient's pain and have knowledge of the means to decrease it.
- Present the case to the MDT and decide whether or not to pursue subsequent treatment.
- Be able to take decisions whether or not the patient should have a stoma.
- Plan and execute the appropriate monitoring and be able to decide when to stop administering chemotherapy.

Knowledge criteria	Clinical Competency	Professional skills and attitudes	Training support	Evidence/assessment
Presentation of a patient with terminal disease	Counsel patients and relatives about: - end-of-life issues - treatment options - interpretation of monitoring results	Ability to empathetically explain the options available to a patient with terminal disease	Observation and assistance of and discussion with senior staff	OSATS
Cause of the patient's condition				Mini-CEX
Knowledge of diagnostic work-up in order to decide appropriate palliative treatment	Discuss palliative care options	Ability to clearly and openly discuss the dismal prognosis and possible treatment options	Attendance and participation in multidisciplinary meetings	Case-based discussions
Appropriate supportive care for patients	Perform appropriate supportive measures including stoma or gastrostomy	Ability to appropriately classify the stage of terminal disease	Participation in decisions regarding patients at a terminal stage of disease	Logbook
Multidisciplinary team meeting discussions and management planning	Organise, in collaboration with the end-of-life nursing staff, the appropriate set up for the patient	Ability to choose the appropriate supportive care	Attendance of special interest meetings	
Monitoring by imaging, follow up, and interpretation of these data	Ensure that the patient receives the appropriate pain control (epidural, opioids)	Ability to perform a clinical examination to decide if the patient would benefit from stoma	Knowledge about when to stop administering chemotherapy	
Diagnosis of the "end of life" stage	Discuss the possibility of end of life at home			

Schematic overview of required competence levels per stage of training in the palliative and supportive care module

Medical skills		Competence level Per stage of training			Number At levels 4-5
		<i>Core</i>	<i>Elective</i>	<i>Fellowship</i>	
<i>Module</i>	<i>Learning target</i>				
Palliative & supportive care	Indications for palliative care	2	4	5	
	Prescribing pain medication	1	3	5	
	Holistic approach of symptoms and worries of the cancer patient and family	2	4	5	

7.2.6 Clinical cancer genetics

Learning outcomes:

- Diagnose, investigate, and manage patients with a genetic predisposition to gynaecological cancer and their families, alongside clinical genetics and other relevant specialty services.

Knowledge criteria	Clinical competency	Professional skills and attitudes	Training support	Evidence/assessment
<p>Familial cancer syndromes (e.g., hereditary breast and ovarian cancer, hereditary ovarian cancer, Lynch Syndrome, Cowden Syndrome): aetiology, risks, clinical features, behaviour</p> <p>The importance of unselected genetic testing at cancer diagnosis</p> <p>Issues involved in counselling for genetic testing at cancer diagnosis</p> <p>The genes involved in oncogenesis of relevant gynaecological or women's cancers</p> <p>The principles of management of women at high risk of gynaecological cancer and options of risk management, including screening and preventive measures, and their consequences</p> <p>The role of prophylactic surgery in the management of patients with a genetic predisposition to gynaecological cancer and the specific problems for follow up in relation to hormonal, psychological, sexual, and long-term health sequelae</p> <p>Molecular targets for prognosis and treatment</p>	<p>Take a three-generation family history and draw a pedigree</p> <p>Counsel a patient with a known predisposition to gynaecological cancer</p> <p>Perform appropriate clinical examination and Investigations</p> <p>Interpret a genetic test result and counsel the patient about it</p> <p>Undertake counselling and genetic testing at cancer diagnosis for epithelial ovarian cancer patients</p> <p>Counsel patients with endometrial cancer on results of molecular testing and investigations including genetic testing for Lynch Syndrome</p> <p>Perform prophylactic surgery involving laparoscopic techniques as required</p> <p>Work with other disciplines to ensure appropriate Management</p>	<p>Ability to identify and counsel patients at high risk of a genetic predisposition to gynaecological cancer</p> <p>Ability to assess and manage patients at high risk of gynaecological cancer such as hereditary breast and ovarian cancer, hereditary ovarian cancer, Lynch Syndrome, Cowden Syndrome</p> <p>Ability to counsel unaffected patients on the subsequent management of a genetic predisposition to gynaecological cancer, including risk of cancer, reproductive choices, cancer screening, prophylactic surgery, and hormone replacement therapy use</p> <p>Ability to discuss advantages and disadvantages of the interventions</p> <p>Ability to undertake counselling and genetic testing at cancer diagnosis for epithelial ovarian cancer patients</p> <p>Ability to counsel patients with endometrial cancer on the results of molecular testing and investigations, including genetic testing for Lynch Syndrome</p> <p>Manage the implications to and counsel family members of a genetic predisposition to gynaecological cancer</p>	<p>Observation and assistance of and discussion with senior staff</p> <p>Working in a supervised environment with senior team members</p> <p>Attendance at special interest meetings</p> <p>Personal study</p> <p>Specific courses, webinars</p> <p>ESGO Masterclass</p> <p>Apprenticeship with specialist clinic managing high-risk women or a clinical genetics unit</p> <p>Postgraduate courses</p> <p>Advanced communication skills training</p> <p>Appropriately supervised surgical training</p>	<p>Direct observation of clinical practice by trainers</p> <p>OSATS</p> <p>Mini-CEX</p> <p>Case-based discussions</p> <p>Logbook</p> <p>Course attendance certificates</p>

Knowledge criteria	Clinical competency	Professional skills and attitudes	Training support	Evidence/assessment
Genetics and implications in relation to targeted therapies such as PARP inhibitors and immunotherapy Variant classification and VUS (variant of uncertain significance)	Liaise with clinical genetics department in the management pathway where appropriate	Ability to perform prophylactic surgery where appropriate and involving minimal access techniques, as required		

Schematic overview of required competence levels per stage of training in the genetics module

Medical skills		Competence level Per stage of training			Number At levels 4-5
<i>Module</i>	<i>Learning target</i>	<i>Core</i>	<i>Elective</i>	<i>Fellowship</i>	
Genetics	Knowledge of familial cancer syndromes	3	4	5	
	Counselling mutation carriers	2	2	5	
	Knowledge of preventive measures and their consequences	2	4	5	
	Knowledge of the genes involved in oncogenesis	2	4	5	
	Knowledge of molecular targets for treatment	1	3	4	

7.2.7 Pathology (including immunology)

Learning objectives:

- Understand the principles of cyto- and histochemical pathology and molecular pathology.
- Be able to execute appropriate sampling with appropriate identification and appropriate clinical requests.
- Interpret cyto- and histopathologic outcomes.

Knowledge criteria	Clinical competency	Professional skills and attitudes	Training support	Evidence/ assessment
<p>The principles of genesis, behaviour, and identification of malignant and benign gynaecological cancers</p> <p>The essential components and functions of the immune system and their relationship to oncology (including therapeutic applications)</p>	<p>Understand the principles underpinning the identification, both from direct visual and microscopic evaluation, of lesions that are premalignant or malignant and distinguish them from benign disorders</p> <p>Understand the genesis of malignant tumours and the biological behaviour of premalignant and malignant tumours, including prognostic features</p> <p>Knowledge of immuno-histochemical stains and the principles of molecular pathology</p> <p>Define a tumour marker and describe the requirements of a tumour marker</p> <p>Describe the properties of current tumour markers</p> <p>Describe the methods for the measurement of markers in terms of the principals involved, sensitivity, specificity, and cross reactivity</p> <p>Describe the properties and generation of monoclonal antibodies and their application to serodiagnosis and tumour localisation and the targeted killing of tumour cells</p> <p>Describe the clinical value and limitations of current markers in use and the significance of false-positive and false-negative results</p> <p>Describe specific tumours of the female genital tract associated with clinically useful markers</p>	<p>Ability to obtain an appropriate sample during biopsy</p> <p>Appropriate transportation of specimens: - use of formaldehyde - dry specimen for frozen section - radioactive specimen during sentinel node mapping</p> <p>Accurate documentation during mapping procedures to facilitate decision-making</p> <p>Ability to interpret pathology reports, including genetic mutation analyses</p>	<p>Attendance at tumour board meetings</p> <p>Attendance at a course, e.g., ESGO-ENYGO Masterclass</p> <p>Laboratory visits</p>	<p>Case-based discussions</p> <p>Certificate of appropriate course attendance</p>

Schematic overview of required competence levels per stage of training in the genetics specific module

Medical skills		Competence level Per stage of training			Number At levels 4-5
<i>Module</i>	<i>Learning target</i>	<i>Core</i>	<i>Elective</i>	<i>Fellowship</i>	
Pathology	Knowledge of pathophysiology	2	3	4	
	Knowledge of gynaecological tumour classification and staging	2	4	5	

7.2.8 Radiotherapy

Learning outcomes:

- Have a basic knowledge of radiation physics, radiation biology, and the different radiotherapy modalities.
- Have a detailed knowledge of indications, acute and late toxicities of radiotherapy in the management of gynaecological cancers.
- Have a detailed knowledge of the use of chemotherapy or other drugs in combination with radiotherapy.
- Communicate with the MDT and select the appropriate radiotherapy for gynaecological cancers.
- Demonstrate adequate skills and attitude to counsel patients and plan radiotherapy treatment for gynaecological cancers.
- Investigate, recognise, and manage early and long-term complications of radiotherapy.
- Plan and execute the appropriate monitoring after radiotherapy with the management of recurrences.

Knowledge criteria	Clinical competency	Professional skills and attitudes	Training support	Evidence/ assessment
Radiation physics: - different types of radiation - inverse square law - depth dose	Understand principles of radiotherapy	Ability to select patients for radiotherapy according to disease and patient characteristics	Observation and assistance of and discussion with senior staff	Direct observation of clinical practice by trainers
Principles of radiation protection	Understand indications and limitations of radiotherapy in gynaecological oncology	Ability to discuss in a multidisciplinary team the indications of radiotherapy for each patient	Attendance and participation in multidisciplinary meetings	OSATS Mini-CEX
Principles of External Beam Radiotherapy	Understand treatment intent (curative or palliative)	Adequate skills and attitude to counsel patients about radiotherapy and then plan treatment and assess response	Attendance at radiotherapy clinics	Case-based discussions
Principles of brachytherapy, including intra-operative radiation	Select patients for radiotherapy	Ability to discuss the results of radiotherapy with patients	Meeting with psychosexual counsellors	Logbook
Radiation biology: - interaction of radiation with tissue and DNA damage - cell survival curves - factors modifying radiation response	Understand treatment planning	Ability to investigate, recognise, and manage adverse effects of radiotherapy	Attendance at special interest meetings	
Recovery and repair of tissues	Counsel patients and relatives about: - radiotherapy - treatment indications - complications	Ability to recognise and manage major complications of radiotherapy with other colleagues	Personal study	
Image-guided planning	Understand the principles of management of early and long-term complications of radiotherapy		Postgraduate courses	
Principles of fractionation			A training period within the dept. of Radiation Oncology	
Radiation delivery				
Indications of radiotherapy in the management of gynaecological cancers	Recognise and manage recurrent disease after radiotherapy			
The use of chemotherapy or other drugs in combination with radiotherapy in gynaecological oncology				

Knowledge criteria	Clinical competency	Professional skills and attitudes	Training support	Evidence/ assessment
Acute and late toxicities of radiotherapy in its different modalities and combination with different agents				

Schematic overview of required competence levels per stage of training in the radiotherapy module

Medical skills		Competence level Per stage of training			Number At levels 4-5
<i>Module</i>	<i>Learning target</i>	<i>Core</i>	<i>Elective</i>	<i>Fellowship</i>	
Radiotherapy	Knowledge of radiation and nuclear medical principles	1	3	5	

7.2.9 Plastic and reconstructive surgery and wound care

(optional)

Learning outcomes:

- Have a basic knowledge of the anatomy of abdominal-pelvic organs and wounds.
- Have detailed knowledge of the devices involved in reconstructive surgery and new surgical materials or strategies.
- Have appropriate knowledge of indications of reconstructive or plastic surgery appropriate for the surgical defect due to previous debulking surgery.
- Have appropriate knowledge of the indication of different surgeries adequately to the tumour prognostic and general status of the patient (including frailty and psycho-emotional consequences).
- Communicate with the MDT and select the most appropriate reconstructive treatment.
- Demonstrate adequate skills and attitude to counsel patients about and plan reconstructive treatments and their sequelae while simultaneously assessing cancer prognosis and the possibility of new recurrences.
- Have updated knowledge and appropriately interpret clinical trials in plastic and reconstructive surgery related to gynaecological oncology.

Knowledge criteria	Clinical competency	Professional skills and attitudes	Training support	Evidence/assessment
<p>Tumour biology: - prognostic criteria and recurrences - involving other non-gynaecological organs</p> <p>Surgical anatomy and biology: - abdominal wounds - pelvic and perineal wall - bowel and mesentery - bladder and ureteric system - retroperitoneum, including vessels, nerves, and support structures</p> <p>Surgical devices involved in reconstructive or plastic surgery: - mesh and sutures - ureteral and vascular catheters - staples for bowel reconstruction - negative pressure devices - others</p> <p>Indications, consequences, and sequelae of different procedures</p>	<p>Collect an appropriate oncologic history and prognosis</p> <p>Perform a clinical examination and imaging assessment of recurrences or anatomic defects</p> <p>Counsel patients and relatives about: - prognosis - treatment options - adverse effects and complications - physical and psychological sequelae</p> <p>Prescribe and plan the most appropriate plastic or reconstructive procedure, including: - abdominal wall reconstruction with or without mesh (i.e., eventration or hernia) - bowel diversion and reconstruction - ureteric or bladder diversion and reconstruction - bladder or bowel reservoirs or pouch - plastic reconstruction of vulvo-perineal excisions and defects - neovagina</p>	<p>Ability to select the most appropriate surgical strategy for gynaecological cancers according to disease and patient characteristics</p> <p>Ability to discuss in a multidisciplinary team the most appropriate surgery for each patient</p> <p>Adequate skills and attitude to counsel patients on the surgical plan, success possibilities, recovery time, and possible complications and sequelae</p> <p>Ability to discuss with patients the results and expectations about plastic or reconstructive treatment</p> <p>Ability to counsel patients about clinical trials</p> <p>Ability to participate in planning and execute updated</p>	<p>Observation and assistance of and discussion with senior staff</p> <p>Specific topic training and supervision</p> <p>Attendance and participation in multidisciplinary meetings</p> <p>Attendance of special interest meetings</p> <p>Personal study</p> <p>Postgraduate courses</p>	<p>Direct observation of clinical practice by trainers</p> <p>OSATS</p> <p>Mini-CEX</p> <p>Case-based discussions</p> <p>Surgical modules</p> <p>Logbook</p>

Knowledge criteria	Clinical competency	Professional skills and attitudes	Training support	Evidence/assessment
<p>Appropriate selection of procedure depending on tumour location and prognosis as well as the patient's general situation (physical and psychological)</p> <p>Up-to-date information on clinical trials in gynaecological oncology surgery techniques and related devices</p>	<p>Assess the response to reconstructive surgery, failure procedure, and possibility of recurrence.</p> <p>Monitor and manage post-surgery recovery, complications, and potential sequelae</p> <p>Modify and change the strategy, including palliative care, depending on tumour response or patient situation</p>	<p>Ability to participate in planning and execute updated algorithms for plastic and reconstructive surgeries</p>		

Schematic overview of required competence levels per stage of training in plastic and reconstructive surgery and wound care module (optional)

Medical skills		Competence level Per stage of training			Number At levels 4-5
Module	Learning target	Core	Elective	Fellowship	
Reconstructive surgery	Recognising the need for plastic surgery	1	3	5	
	Treatment of wound complications	1	2	5	

7.2.10 Radiology (including nuclear medicine)
(optional)

Learning outcomes

- Have a basic knowledge of radiological and nuclear physical principles.
- Be able to adequately order and interpret imaging diagnostics.

Knowledge criteria	Clinical competency	Professional skills and attitudes	Training support	Evidence/assessment
Principles of imaging techniques, including nuclear medicine	Correct and targeted ordering of radiological diagnostics	Communication with imaging specialists	Observation and assistance of and discussion with senior staff	Direct observation of clinical practice by trainers
Knowledge of limitations and risks of various imaging techniques	Give clinical feedback to imaging specialists	Interpretation of common CT, MRI, and PET scans	Discussions at MDT	Case-based discussions
Basic knowledge of radiation physics pertinent to radiology and nuclear medicine	Cooperation in diagnostic interventions	Application and interpretation of sentinel lymph node detection	Interactive app	Logbook
Basic knowledge of contrast media, radiopharmacology, and radionuclides				

Schematic overview of required competence levels per stage of training in the radiology and nuclear medicine module (optional)

Medical skills		Competence level Per stage of training			Number At levels 4-5
Module	Learning target	Core	Elective	Fellowship	
Radiology & nuclear medicine	Basic knowledge of radiological and nuclear physical principles	1	3	5	
	Adequate ordering and interpretation of imaging	1	3	5	

7.3 General competency modules

7.3.1 Communication, collaboration, leadership, and management

Learning objectives:

- Demonstrate effective communication with patients and colleagues.
- Demonstrate good working relationships with colleagues.
- Demonstrate the ability to work in clinical teams and gain the necessary leadership skills.

Knowledge criteria	Clinical competency	Professional skills and attitudes	Training support	Evidence/assessment
<p>Communication:</p> <p>Know how to structure a patient interview to identify:</p> <ul style="list-style-type: none"> - concerns and priorities - expectations - understanding an acceptance <p>Breaking bad news</p> <p>The bereavement process and behaviour</p> <p>Team working:</p> <p>Roles and responsibilities of team members</p> <p>Factors that influence and inhibit team development</p> <p>Ways of improving team working including:</p> <ul style="list-style-type: none"> - objective setting and planning - motivation and demotivation -organisation -respect <p>Contribution of mentoring and supervision</p> <p>Leadership:</p> <p>Qualities and behaviour</p> <p>Styles</p> <p>Implementing change and change management</p>	<p>Counsel patients regarding diagnosis, management, and risks of treatment</p> <p>Manage intra- and postoperative complications with the gynaecological oncology team</p> <p>Inform patient of results</p> <p>Liaise with nutritional and other support team</p>	<p>Ability to communicate effectively with:</p> <ul style="list-style-type: none"> - colleagues - patients and relatives <p>Ability to break bad news appropriately and to support distress</p> <p>Ability to work effectively within a subspecialty team</p> <p>Ability to lead a clinical team</p> <p>Ability to respect others' opinions</p> <p>Ability to deal with difficult colleagues</p>	<p>Observation and assistance of and discussion with senior staff</p>	<p>Supervisor's report</p> <p>Multisource feedback forms</p>

Schematic overview of required competence levels per stage of training in the communication, team working, leadership and management domains

Medical Core Competencies (cf. ACGME)					
<i>Domain</i>	<i>Learning target</i>				
Interpersonal and communicative skills	Communication with other care providers and health-related agencies	1	3	5	
	Communication with patients and family	2	4	5	
	Discussing bad news/resuscitation	1	3	5	20
	Work effectively as a member or leader of a team	2	4	5	
	Act in a consultative role	2	4	5	
	Maintain comprehensive, timely and legible medical record	3	4	5	
	Participation in education	2	3	5	

7.3.2 Good medical practice, clinical governance, and management

Learning objectives:

- Understand and demonstrate appropriate knowledge and skills in relation to good medical practice, clinical governance, and risk management.
- Inculcate the habit of lifelong learning and continued professional development.
- Acquire the knowledge, attitude, and skills to act in a professional manner at all times.

Knowledge criteria	Clinical competency	Professional skills and attitudes	Training support	Evidence/assessment
<p>The importance of continued professional development</p> <p>The doctor-patient relationship, ethical principles (beneficence, non-maleficence, autonomy), informed consent, confidentiality, and data protection</p> <p>The principles of clinical governance</p> <p>The principles, structure, and steps of an audit cycle</p> <p>The principles of risk management, incident and near-miss reporting, complaint management</p> <p>The duty of candour</p> <p>Clinical effectiveness, evidence-based medicine, different hierarchies of evidence, and grades of recommendations</p> <p>The importance of protocols, guidelines, and integrated care pathways</p>	<p>Practice evidence-based medicine</p> <p>Undertake a clinical audit</p> <p>Develop and implement a clinical protocol and/or guideline</p> <p>Develop Patient Information Sheets</p> <p>Participate in risk management</p> <p>Perform appraisals</p>	<p>Ability to undertake a clinical audit (evidenced by undertaking one audit a year)</p> <p>Ability to practice evidence-based medicine</p> <p>Ability to develop and implement a clinical protocol and/or guideline</p> <p>Ability to develop Patient Information Sheets</p> <p>Ability to investigate and report a critical incident and suspected unexpected serious adverse reaction (SUSAR)</p> <p>Ability to respond to a complaint in a constructive and objective manner</p> <p>Ability to recognise ethical issues related to the sub-specialty</p> <p>Ability to recognise and use learning opportunities</p> <p>Ability to recognise one's own limitations and seek advice appropriately</p> <p>Ability to deal appropriately with challenging behaviour</p>	<p>Observation of and discussion with senior medical staff and the clinical governance team</p> <p>Attendance at risk-management meetings</p> <p>Appropriate literature, guidelines</p>	<p>Log of experience</p> <p>Supervisor reports</p> <p>Attendance certificate of appropriate course(s) and meeting(s)</p> <p>Audit report</p>

7.4 Research

Learning objectives:

To understand and demonstrate appropriate knowledge, skills, and attitudes in relation to undertaking research relevant to the subspecialty of gynaecological oncology.

Knowledge criteria	Clinical competency	Professional skills and attitudes	Training support	Evidence/assessment
<p>Clinical research methodology</p> <p>Medical statistics for clinical research (e.g., descriptive statistics, parametric and non-parametric tests, tests for continuous and categorical variables, chi-square and t-tests, correlation and regression analysis, survival analysis)</p> <p>Understand principles of sampling, sample size, and power calculations</p> <p>Knowledge of epidemiological methods in medical research</p> <p>Understanding of trial design methodology</p> <p>Knowledge of evidence-based medicine and hierarchy of strength of evidence</p> <p>Knowledge of ethical committee regulations and requirements</p> <p>Knowledge of research legislation, research governance procedures and requirements</p> <p>Understanding of the roles and responsibilities of the different individual and organisations in the research environment</p> <p>Writing research protocols and peer-reviewed papers</p> <p>The principles of and how to take informed consent and the roles and responsibilities of those involved in it</p> <p>Information governance, data management, and General Data Protection Regulation (GDPR)</p>	<p>Develop a hypothesis</p> <p>Design an experiment or research study</p> <p>Define sample size</p> <p>Undertake a statistical analysis</p> <p>Draw appropriate conclusions from results</p> <p>Create an oral or poster presentation</p> <p>Write and publish a peer-reviewed research paper</p>	<p>Ability to develop a hypothesis, design and conduct a scientific experiment or scientific research</p> <p>Ability to undertake a critical review of a research topic/idea</p> <p>Ability to critically appraise a scientific paper</p> <p>Ability to present a piece of scientific research (oral or poster presentation)</p> <p>Ability to write up research evidenced by at least one peer-reviewed PubMed citable publication (A research thesis like MD or PhD is desirable but not an essential part of the research component for this training)</p> <p>Ability to take informed consent and recruit patients to research studies</p> <p>Ability to submit a research proposal for ethics approval</p> <p>Ability to participate as an investigator in clinical research studies</p>	<p>Appropriate post-graduate research skill development courses</p> <p>Statistical courses</p> <p>Information governance course</p> <p>Attending scientific meetings</p> <p>Access to scientific journals</p> <p>Discussion with senior staff (clinicians, scientists, statisticians)</p> <p>Mentoring and supervision by senior staff</p>	<p>Good Clinical Practice Research certification</p> <p>Record of certificate of attendance at appropriate course(s)</p> <p>Submission of research for ethics approval</p> <p>Study consent form</p> <p>Patient information leaflet</p> <p>Data collection form</p> <p>Devise/critically appraise a protocol for research through local/regional R&D offices</p> <p>Peer-reviewed, PubMed-citable publication</p> <p>Poster or oral presentation at a conference</p> <p>MD or PhD degree</p>

Knowledge criteria	Clinical competency	Professional skills and attitudes	Training support	Evidence/assessment
<p>Research integrity: understanding issues around misconduct, scientific fraud, plagiarism, and the reporting of such</p> <p>Adverse events and reporting of suspected unexpected serious adverse reaction (SUSAR)</p>				

Schematic overview of required competence levels per stage of training in research.

Medical skills		Competence level Per stage of training			Number At levels 4-5
Module	Learning target	Core	Elective	Fellowship	
Research	Peer reviewed publication	0	2	5	2*

* The fellow can also complete (the equivalent of) an Advanced Professional Module of Clinical Research or a Master in Clinical Research instead of producing a publication. Examples:

<https://www.rcog.org.uk/en/careers-training/specialty-training-curriculum/apm/>

<https://web.uniroma1.it/masterricercaclinica>

<http://www.usc.es/en/centros/ciedus/edi/titulacions.html?plan=15544&estudio=15545&codEstudio=15019&valor=9&orde=true>

8. Training objectives covered during general training

Training objectives that may be covered during an elective as defined across Europe for general training (expected level of competence: 'can manage/perform independently') are:

1. General assessment of an oncological patient.
2. Peri-operative care.
3. Diagnostic laparoscopy.
4. Ovarian cystectomy.
5. Hysteroscopy.
6. Small vulvar procedures.
7. Colposcopy, including loop excision/conisation of the cervix.
8. Hysterectomy for early-stage endometrial cancer.
10. Histological sampling (Tru-cut biopsy/incisional biopsy).
11. Assessing and planning management of gynaecological tumours.
12. Knowledge of cancer genetics.
13. Knowledge of palliative care.
14. General knowledge of oncological pathology.

9. Assessment

Training should be structured with clearly defined targets throughout to be met after specified intervals. An educational plan should be drawn up in consultation with the trainee at the beginning of each new training setting or post, and progress should be monitored regularly by means of the logbook.

Multi-source feedback (MSF), including a self-assessment of the trainee as well as MSF of the training team, is required at least once a year.

Evaluation of the skills and knowledge of the fellow and their compliance with the curriculum is evaluated, taking into account both:

- **Competency-based assessments**
 - The domains of core competencies for the purpose of the ESGO curriculum will be defined according to ACGME (6 competence domains). There is at least one (1) assessment required per year, but it is recommended to perform the assessment at least once every half year.
 - OSATS are required for the assessment of surgical skills. Other validated assessment tools may also be used to complete the portfolio (see [addendum 12.2](#) for assessment tools). There should be at least three (3) formative assessments of surgical skills per complex procedure with at least two (2) summative assessments confirming that the fellow has achieved the required competence for the specific procedure.
- **Volume criteria assessment**
 - This assessment is defined for performed surgical cases and other skills (see 1.5.2. Quantitative criteria certifying for a fellow/trainee). Volume criteria may not be universally sustainable; therefore, for certification, training should include a defined number per the limited number of procedures.
- **Additional courses**

All of the above must be documented in the *logbook*, including the portfolio, which must be completed within four (4) years from the start of training.

Note that within modular training, the deconstruction of procedures is essential; therefore, assessment should not only take place per procedure but also for segments of (the selected) procedures separately (e.g., ureteric tunnel dissection).

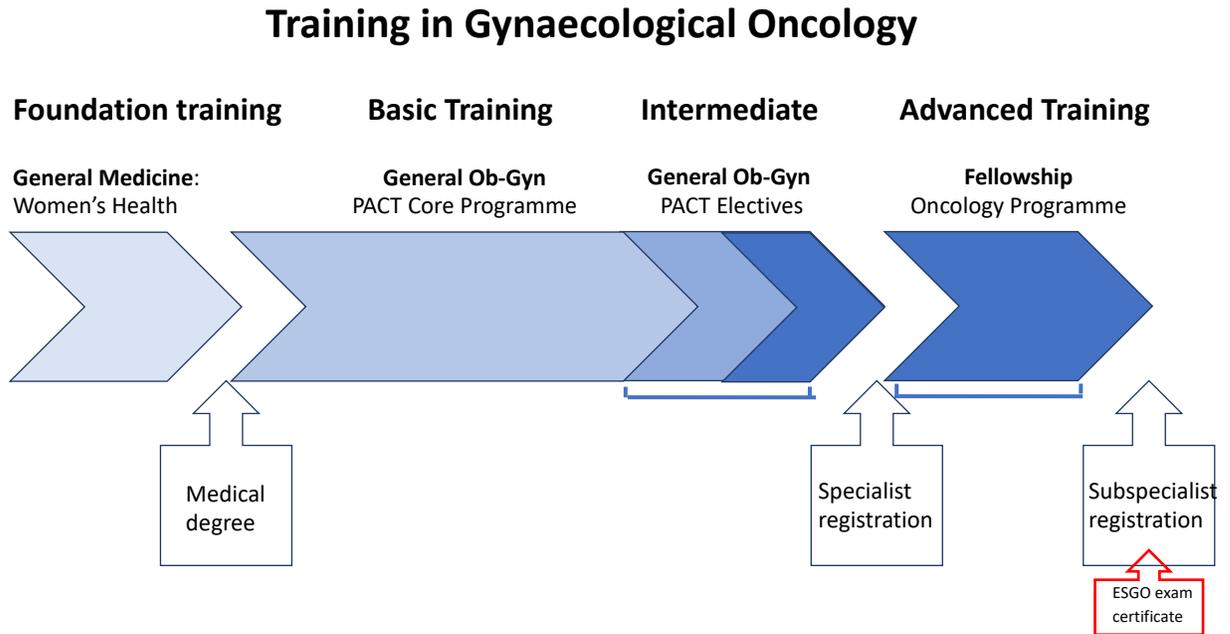

During the fellowship, a *real-time portfolio* (i.e., completed after each element/procedure and not only at the end of the training) must be kept documenting the modules followed and cases performed together with the assessments. The portfolio will be accessible online through ESGO's website. The logbook will contain *documentation of summative assessments*. At least once a year, the trainee's current levels of proficiency/competency should be set out, marked as follows: 1 (passive assistance/knowledge of); 2 (can perform under direct supervision); 3 (can perform with some supervision); 4 (can perform without supervision); 5 (can perform and supervise/teach).

The use of a portfolio implies that the time to acquire the necessary elements may vary between individuals, depending on exposure, skills, personal circumstances, and employment.

10. Matrice

10.1 Matrix of training years

10.1.1 [Diagram of gynaecological oncology training](#)
For details, see [matrix 10.2](#).

10.1.2 Matrix of the gynaecological oncology training programme

Action	Place in timeline	Responsible person
Centre accreditation	At least one year before the end of the fellowship	Head of Department
Choosing the training centre	Before registration of the fellowship	Fellow candidate
Registration of fellowship	Before start of fellowship	Fellow candidate
Registration of portfolio and submitting required personal information	At the start of fellowship	Fellow
Systematic and structured formative assessment of procedures. At least three (3) per radical procedure (of which at least 2 at the required level of competency)	Along the training period.	Fellow
Structured summative assessment: Multiple Source Feedback	At least once a year. Twice yearly is recommended	Fellow
Structured summative assessment: Evaluation by the Educational Supervisor	At least once a year. Twice yearly is recommended	Educational Supervisor
Completion of portfolio	Within 4 years of starting the fellowship	Fellow
Successfully passing ESGO Exam	Within 6 years of starting the fellowship	Fellow
Application for certification with the ESGO Diploma	Within 1 year after portfolio completion or passing the ESGO exam (whichever comes last)	Fellow
Issuing ESGO Diploma	At the yearly ESGO meeting	Chair WG Fellowship and Observership & ESGO Council
Re-certification	Not yet available	

10.2 Matrix of learning objectives

Schematic overview of required competence levels per stage of training

Medical skills		Competence level Per stage of training			Number If required at levels 4-5
Module	Learning target	Core	Elective	Fellowship	
ORGAN-SPECIFIC					
Uterine cancer	Diagnostic and therapeutic plan	3	4	5	
	Surgery for low-risk cancer	2	4	5	
	Radical surgery for high-risk cancer	1	2	5	
	Weighing treatment options and morbidity	2	3	5	
	Fertility-sparing treatment	1	1	4	
Ovarian & tubal cancer	Diagnostic and therapeutic plan	3	4	5	
	Systematic use of US and tumour markers	1	3	5	
	Surgical radical treatment	1	2	5	
	Organising MDT	1	3	5	
	Follow-up	2	3	5	
Cervical cancer	Knowledge of prevention	3	4	5	
	Colposcopy	1	4	3	
	Diagnostic and therapeutic plan	3	3	5	
	Surgical (radical) treatment	1	2	5	
Vaginal cancer	Diagnostic and therapeutic plan	1	3	4	
	Radical surgical treatment	1	1	4	
Vulvar cancer	Diagnostic and therapeutic plan	3	4	5	
	Description and drawing of vulvar situation (disease mapping)	2	4	5	
	Excision biopsy	3	4	5	
	Local excision	1	4	5	
	Radical surgery for vulvar cancer	1	2	5	
GTD	Recognition and diagnosis of GTD/GTN	3	4	5	
	Surgical and medical treatment of GTD	3	4	5	
	Treatment plan for GTN	1	3	5	

Medical skills		Competence level Per stage of training			Number If required at levels 4-5
GENERIC					
Gyn.onc. surgery	Gyn.onc anatomical knowledge	2	4	5	
	Recognition and treatment of surgical complications	1	4	5	
	Specific surgical skills:				
	- hysterectomies for uterine cancer	2	4	5	
	- radical hysterectomies	1	2	5	
	- radical trachelectomy	1	1	3	
	- pelvic lymph node dissection (open)	1	3	5	30
	- pelvic lymph node dissection (laparoscopically)	1	3	5	
	- lumbo-aortic lnd (open)	1	1	5	10
	- lumbo-aortic lnd (laparoscopically)	1	1	4	
	- local wide excision vulva	1	2	5	5
	- inguino-femoral lnn evaluation	1	2	4	10
	- (radical) colpectomy	1	1	4	
	- creation neovagina	1	1	3	
	- infra+supracolic omentectomy	1	3	5	
	- cytoreductive surgeries	1	2	5	30
	- laparoscopic assessment ovarian cancer	1	2	5	
	- laparoscopic insertion IP catheter	1	2	4	
	- exenterations	1	1	4	
	- LLETZ/LEEP of cervix	2	4	3	
	- enterotomy	1	2	3	
	- cytologic biopsy (FNA)	2	3	5	
	- histologic biopsy (Tru-cut)	1	3	5	
Urologic surgery	- urinary deviation	1	1	2	
	- recognition and dissection of the ureter	2	4	5	
Reconstr. surgery	Recognising need for plastic surgery	1	3	5	
	Treatment of wound complications	1	2	5	
Systemic therapy	Pharmacological knowledge of cytostatic and cytotoxic agents	1	2	4	
	Knowledge of mechanisms of targeted therapy	1	2	4	
	Knowledge of indications	1	3	5	
	Acquaintance with clinical trials	1	3	5	
Radiotherapy	Knowledge of radiation and nuclear medical principles	1	3	4	
Palliative & supportive care	Indications for palliative care	2	4	5	
	Prescribing pain medication	1	3	5	
	Holistic approach of symptoms and worries of the cancer patient and family	2	4	5	

Medical skills		Competence level Per stage of training			Number If required at levels 4–5
Genetics	Knowledge of familial cancer syndromes	3	4	5	
	Counselling mutation carriers	2	2	5	
	Knowledge of preventive measures and their consequences	2	4	5	
	Knowledge of genes involved in oncogenesis	2	4	5	
	Knowledge of molecular targets for treatment	1	3	4	
Pathology	Knowledge of pathophysiology	2	3	4	
	Knowledge of gynaecological tumour classification and staging	2	4	5	
Peri-operative care	Knowledge and application of ERAS principles	1	4	5	
Research	Peer-reviewed publication	0	2	5	2
Medical Core Competencies (cf. ACGME)					
<i>Domain</i>	<i>Learning target</i>				
Practice-based learning and improvement	Identify personal limits	2	3	5

	Communication with patients and family	2	4	5	
	Discussing bad news/resuscitation	1	3	5	20
	Work effectively as a member or leader of a team	2	4	5	
	Act in a consultative role	2	4	5	
	Maintain comprehensive, timely and legible medical record	3	4	5	
Professionalism	Handling oncological patients	1	3	5	
	Handling grief and emotions	2	3	5	
	Recognition of pathological grief	1	3	5	
	Handling religious and other convictions	2	4	5	
	Monitoring and comparing results of clinical care, up to responsible for clinical audit (latter end target)	1	3	5	2
	Knowledge and use of complication and mortality register	1	4	5	
	Self-reflection	2	4	5	

* Numbers (not level)

Competence level scores

- 1 = passive assistance/knowledge of
- 2 = can perform under direct supervision
- 3 = can perform with some supervision
- 4 = can perform without supervision
- 5 = can perform and supervise/teach

Core competences in PACT training

The elements that are part of the EBCOG PACT core curriculum are indicated in light blue. The elements that are part of the PACT electives are indicated in dark blue (corresponding to figure 10.1.1)

Abbreviations

EBM	Evidence-based Medicine
ENYGO	European Network of Young Gynaecological Oncologists
ERAS	Enhanced Recovery After Surgery
ESGO	European Society of Gynaecological Oncology
GTD	Gestational Trophoblastic Disease
GTN	Gestational Trophoblastic Neoplasm
IP	Intra-peritoneal
FNA	Fine needle aspiration
LND	Lymph node dissection
LN(N)	Lymph node(s)
MDT	Multidisciplinary Team

11. Portfolio

PORTFOLIO

for

Training in Gynaecological Oncology

Introduction

The ESGO accreditation and certification programme ('Curriculum') describes, prescribes, and accredits the training in gynaecologic oncology.

The Curriculum describes qualitative and quantitative criteria to be met for certification. After having signed up for the fellowship programme, it is the responsibility of the *subspecialty trainee for gynaecological oncology*, also called 'the fellow', to document all training details, make sure the appropriate documents are completed and signed off by the appropriate parties, and, finally, submit them to ESGO.

The Curriculum requires modular training with systematic and structured assessments, and these should be recorded prospectively, i.e., continuously updated throughout the training. At the same time, these assessments should be evaluated according to the principles of competence-based training in order to provide immediate feedback to both the fellow and the training supervisors for appropriate corrections if required.

The online portfolio allows adequate monitoring of progress in competence-based training. As such, it is not only an indispensable instrument to guide the fellow as objectively as possible through the training programme, it also ensures patient safety because deficits in training can immediately be detected and corrected.

Use of the portfolio

In order to evaluate training progress properly, it is essential that the portfolio will be systematically and continuously (prospectively) completed, starting from the very beginning of training. It is part of summative assessments to check and discuss adequate completion of the portfolio. Missing items should be noticed and added.

Descriptive data can be entered by the fellow and corrected at any time. Assessments, on the other hand, are to be signed off by an Educational Supervisor.

Access

Depending on national regulations, the portfolio contains information that will be available at any time for both the fellow as well as the Educational Supervisor(s) and the Educational Programme Director. To this end, all that require access will be able to log in to the portfolio using their personal login data. If the online portfolio is not available, the fellow needs to keep a paper version available at all times.

TRAINING ASSESSMENTS: Summative assessments

Summative assessments should be performed at least yearly and evaluated by the Educational Supervisor together with the fellow. However, it is strongly recommended that these assessments be held every half year.

Self-assessment:

This assessment should be completed PRIOR to the evaluation with the Educational Supervisor and should be completed by the fellow him/herself.

SELF ASSESSMENT <i>Competence-based assessment</i>		
Date (DD/MM/YY)		
ACGME Outcome	Learning target	Competence level: 1. None 2. Some 3. Full competence
Practice-based learning and improvement	Identify personal limits	
	Set learning goals	
	Identify and perform appropriate learning activities	
	Incorporate formative evaluation feedback into daily practice	
	Adequate use of scientific evidence	
	Adequate use of information technology	
Patient care and procedural skills	Participation in education	
	Adequate gathering of information	
	Adequate synthesis of findings	
Systems-based practice	Partnership with patients and family	
	Work effectively in health care system	
	Consider cost-effectiveness	
	Consider quality of care	
Medical knowledge	Consider and identify patient safety issues, including identifying system errors	
	Knowledge and application of EBM	
	Knowledge about the principles of clinical trials	
	Knowledge of protocols/guidelines. Patient info sheets (being responsible for one of these as end target)	
	Papers and/or presentations	
	Successfully attended courses:	
	- teach-the-teacher course	
	- course for leadership/management	
	Attendance of national conference/meetings	
	Attendance of international meetings	
Membership of ENYGO/ESGO	yes/ no	
Interpersonal and communicative skills	Communication with other care providers and health-related agencies	
	Communication with patients and family	
	Discussing bad news/resuscitation	
	Work effectively as a member or leader of a team	
	Act in a consultative role	
	Maintain comprehensive, timely and legible medical record	

ACGME Outcome	Learning target	Competence level: 1. None 2. Some 3. Full competence
Professionalism	Handling oncological patients	
	Handling grief and emotions	
	Recognition of pathological grief	
	Handling religious and other convictions	
	Monitoring and comparing results of clinical care, up to being responsible for clinical audit (latter end target)	
	Knowledge and use of the complication and mortality register	
	Self-reflection	
Points for improvement		

(add up to at least three assessments during the training)

Multi-source feedback by the training team:

Evaluation by at least two (2) wider multidisciplinary team members other than the Educational Supervisor (nurses, surgeons, anaesthetists, medical or radiation oncologists, etc.) to be completed either directly by the team member or by the fellow or copying a printed version. In order for the team member to complete it directly, the fellow must log in to the online system first for them.

Circle the number that indicates how characteristic each behaviour below is of the resident.

MULTI-SOURCE FEEDBACK (MSF)									
Name of member									
Role in team									
Date (DD/MM/YY)									
	NOT AT ALL CHARACTERISTIC			CHARACTERISTIC			HIGHLY CHARACTERISTIC		
Professionalism									
Responsibility	Accepts responsibilities willingly; follows through on tasks carefully and thoroughly; is dependable and industrious; responds to requests in a helpful and prompt manner								
	1	2	3	4	5	6	7	8	9
Scope of practice	Recognises limits of his/her abilities; asks for help when needed; refers patients when appropriate; exercises authority accorded by position and /or experience								
	1	2	3	4	5	6	7	8	9
Patient needs	Responds to each patient’s unique needs and characteristics by being sensitive to issues related to patient culture, age, gender and disabilities; provides equitable care regardless of patient culture or socioeconomic status								
	1	2	3	4	5	6	7	8	9
Integrity and ethical behaviour	Takes responsibility for actions; admits mistakes; puts patient needs above own interests; recognises and addresses ethical dilemmas and conflicts of interest; maintains patient confidentiality								
	1	2	3	4	5	6	7	8	9
Interpersonal & Communication Skills									
Relationship-building	Establishes rapport with patients and their families; demonstrates care and concern; is respectful and considerate; provides reassurance; manages difficult patient/family situations								
	1	2	3	4	5	6	7	8	9
Team interaction	Demonstrates courtesy to and consideration of consultants, therapists, physicists, & other team members; provides timely updates; invites others to share their knowledge and opinions; negotiates & compromises when disagreements occur								
	1	2	3	4	5	6	7	8	9

Remarks									
	UNSATISFACTORY			SATISFACTORY			SUPERIOR		
Overall rating	1	2	3	4	5	6	7	8	9
Please explain “not at all characteristic” ratings:									
The fellow and Supervisor will discuss this evaluation and the fellow’s overall performance in the programme, and ways to improve performance if and as needed.									

(More evaluations to be added according to the number of assessors; completed paper versions to be uploaded here)

Evaluation by the Educational Supervisor

The summative evaluation should be performed at least yearly, but preferably half yearly or more often if necessary, and should at least entail:

- A competency-based assessment
- An assessment of level of proficiency
- An evaluation of educational activities
- An evaluation of research activities
- Identification of specific training objectives for the next phase

EVALUATION BY EDUCATIONAL SUPERVISOR <i>Competency-based assessment</i>		
Name of Supervisor		
Date (DD/MM/YY)		
ACGME Outcome	Learning target	Competence level 1. None 2. Some 3. Full competence
Practice-based learning and improvement	Identify personal limits

	Handling religious and other convictions	
	Monitoring and comparing results of clinical care, up to being responsible for a clinical audit (latter end target)	
	Knowledge and use of the complication and mortality register	
	Self-reflection	

(add at least up to three assessments)

EVALUATION BY EDUCATIONAL SUPERVISOR			
<i>assessment of level of proficiency</i>			
Name of supervisor			
Date (DD/MM/YY)			
Medical skills		Competency level	Cumulative Number
		1. Passive 2. Direct supervision 3. Some supervision 4. Without supervision 5. Supervises/ teaches	At levels 4–5
<i>Module</i>	<i>Learning target</i>		
ORGAN-SPECIFIC			
Uterine cancer	Diagnostic and therapeutic plan		
	Surgery for low-risk cancer		
	Radical surgery for high-risk		
	Weighing treatment options and morbidity		
	Fertility-sparing treatment		
Ovarian & tubal cancer	Diagnostic and therapeutic plan		
	Systematic use of US and tumour markers		
	Surgical radical treatment		
	Organising MDT		
	Follow-up		
Cervical cancer	Knowledge of prevention		
	Diagnostic and therapeutic plan		
	Surgical (radical) treatment		
Vaginal cancer	Diagnostic and therapeutic plan		
	Radical surgical treatment		
Vulvar cancer	Diagnostic and therapeutic plan		
	Description and drawing of vulvar situation		
	Excision biopsy		
	Local excision		
	Radical surgery for vulvar cancer		
GTD	Recognition and diagnosis of GTD/GTN		
	Surgical and medical treatment of GTD		
	Treatment plan for GTN		
GENERIC			
Gyn.onc. surgery	Gyn.onc anatomical knowledge		
	Recognition and treatment of surgical complications		
	Specific surgical skills:		
	- hysterectomies for uterine cancer		
	- radical hysterectomies		
	- radical trachelectomy		
	- pelvic lnd (open)		
	- pelvic lnd (laparoscopically)		
	- lumbo-aortic lnd (open)		
	- lumbo-aortic lnd (laparoscopically)		
	- local wide excision vulva		
	- inguino-femoral lnn evaluation		
	- (radical) colpectomy		
	- creation neovagina		
	- infra+supracolic omentectomy		

Medical skills		Competency level 1. Passive 2. Direct supervision 3. Some supervision 4. Without supervision 5. Supervises/ teaches	Cumulative Number At levels 4–5
Gyn.onc. surgery	- cytoreductive surgeries		
	- laparoscopic assessment ov.ca.		
	- laparoscopic insertion IP catheter		
	- exenterations		
	- LLETZ/LEEP of cervix		
	- enterostomy		
	- cytologic biopsy (FNA)		
	- histologic biopsy (Tru-cut)		
Urologic surgery	- urinary deviation		
	- recognition and dissection ureter		
Reconstr. surgery	Recognising need for plastic surgery		
	Treatment of wound complications		
Systemic therapy	Pharmacological knowledge of cytostatic agents		
	Knowledge of indications		
	Acquaintance with clinical trials		
Radiotherapy	Knowledge of radiation and nuclear medical principles		
Palliative & supportive care	Indications for palliative care		
	Prescribing pain medication		
	Holistic approach to the symptoms and worries of the cancer patient and family		
Genetics	Knowledge of familial cancer syndromes		
	Counselling mutation carriers		
	Knowledge of preventive measures and their consequences		
	Knowledge of genes involved in oncogenesis		
	Knowledge of molecular targets for treatment		
Pathology	Knowledge of pathophysiology		
	Knowledge of gynaecological tumour classification and staging		
Peri-op. care	Knowledge and application of ERAS principles		

EVALUATION BY EDUCATIONAL SUPERVISOR <i>Assessment of educational activities</i>	
Name of supervisor	
Date (DD/MM/YY)	
Verdict	Issues
What went well?	
What could be improved?	

EVALUATION BY EDUCATIONAL SUPERVISOR <i>Assessment of research activities</i>	
Name of supervisor	
Date (DD/MM/YY)	
Verdict	Issues
What went well?	
What could be improved?	

EVALUATION BY EDUCATIONAL SUPERVISOR <i>Summary and training plan</i>	
Name of supervisor	
Date (DD/MM/YY)	
	Verdict/Issues
Summary 1. Below expected level 2. At expected level 3. Above expected level	
Specific training objectives for the next phase	
Final remark(s) by fellow	
Agreement with summary of evaluation (both the fellow and the Educational Supervisor sign to witness that this summary is correct)	
Electronic signature fellow	Log in here
Electronic signature Supervisor	Log in here

(more assessments to be repeated as required)

TRAINING ASSESSMENTS: Formative assessments

Per module and procedure, the required number of structured assessments need to be performed and approved by both the fellow and the Educational Supervisor/assessor.

ESGO recommends:

- Evaluating *knowledge* using the ACGME competency assessment
- Evaluating *surgical skills* using OSATS

These recommended and validated assessment tools are available online within this portfolio and these are supported by real-time evaluation algorithms allowing progress to be followed. Other validated assessment tools may also be used, but they need to be uploaded or recorded in an open field and the assessment forms (either in print or digital) need to be uploaded.

COMPETENCY ASSESSMENT <i>ACGME outcomes checklist</i>		
Name assessor		
Date (DD/MM/YY)		
Module/ tumour type		
ACGME Outcome	Learning target	Competence level 1. None 2. Some 3. Full competence
Practice-based learning and improvement	Identify personal limits	
	Set learning goals	
	Identify and perform appropriate learning activities	
	Incorporate formative evaluation feedback into daily practice	
	Adequate use of scientific evidence	
	Adequate use of information technology	
	Participation in education	
Patient care and procedural skills	Adequate gathering of information	
	Adequate synthesis of findings	
	Partnership with patients and family	
Systems-based practice	Work effectively in the health care system	
	Consider cost-effectiveness	
	Consider quality of care	
	Consider and identify patient safety issues, including identifying system errors	
Medical knowledge	Knowledge and application of EBM	
	Knowledge about the principles of clinical trials	
	Knowledge of protocols/guidelines/patient info sheets (being responsible for one of these as end target)	
	Papers and/or presentations	
	Successfully attended courses:	
	- teach-the-teacher course	
	- course for leadership/management	
	Attendance of national conference/meetings	
Attendance of international meetings		
Membership of ENYGO/ESGO		no/yes

ACGME Outcome	Learning target	Competence level 1. None 2. Some 3. Full competence
Interpersonal and communicative skills	Communication with other care providers and health-related agencies	
	Communication with patients and family	
	Discussing bad news/resuscitation	
	Work effectively as a member or leader of a team	
	Act in a consultative role	
	Maintain comprehensive, timely, and legible medical records	
Professionalism	Handling oncological patients	
	Handling grief and emotions	
	Recognition of pathological grief	
	Handling religious and other convictions	
	Monitoring and comparing results of clinical care, up to being responsible for a clinical audit (latter end target)	
	Knowledge and use of the complication and mortality register	
	Self-reflection	
Agreement with assessment		
(both the fellow and the Educational Supervisor sign to witness that the assessment has correctly been documented)		
Signature fellow	Log in here	
Signature assessor	Log in here	

(more assessments to be repeated as required)

SKILLS ASSESSMENT (using principles of OSATS, Mini CEX, or CBD)						
Supervisor's name						
Supervisor's role						
Date (DD/MM/YY)						
Clinical setting	Outpatient/inpatient/acute admission/theatre/other					
Procedure/case

12. Addenda

12.1 Abbreviations

ABOG	The American Board of Obstetrics and Gynaecology
ACGM	Accreditation Council for Graduate Medical Education: Six core competencies: 1. Practice-Based Learning and Improvement, 2. Patient Care and Procedural Skills, 3. Systems-Based Practice, 4. Medical Knowledge, 5. Interpersonal and Communication Skills, 6. Professionalism
APSS	Assessment of Procedural and Surgical Skills
CanMEDS	Canadian College of Physicians score: Core competencies in seven roles: 1. Medical Expert (the integrating role), 2. Communicator, 3. Collaborator, 4. Leader, 5. Health Advocate, 6. Scholar, 7. Professional
CBD	Clinically Based Discussion
EBCOG	European Board & College of Obstetrics and Gynaecology
EBM	Evidence-Based Medicine
ENYGO	European Network of Young Gynaecological Oncologists
ERAS	Enhanced Recovery After Surgery
ESGO	European Society of Gynaecological Oncology
FNA	Fine-needle aspiration
GRITS	Global Rating Index for Technical Skills (Doyle, Am J Surg 2007)
GTD	Gestational Trophoblastic Disease
GTN	Gestational Trophoblastic Neoplasm
IP	Intra-peritoneal
LMIC	Low- and middle-income countries (according to the World Bank)
LND	Lymph node dissection
LN(N)	Lymph node(s)
MDT	Multidisciplinary Team
Mini-CEX	Mini-Clinical Evaluation Exercise
NVOG	Nederlandse Vereniging voor Obstetrie en Gynaecologie
OSATS	Objective Structured Assessment of Technical Skill (Martin e.a., Br J Surg 1997)
PACT	Project for Achieving Consensus in Training
PBLI	Practice-based learning and improvement
RANZOG	The Royal Australian and New Zealand College of Obstetricians and Gynaecologists
RCOG	The Royal College of Obstetricians and Gynaecologists
SOP	Standard Operational Procedure
STSAF	Structured Technical Skills Assessment Form (Winckel e.a., Am J Surg 1994)
TPN	Total Parenteral Nutrition

12.2 Assessment tools

12.2.1 OSATS

Structured assessments:			
Objective Structured Assessment of Technical Skills (OSATS)			
Fellow's name:	Supervisor's name:	Date:	Procedure:
Year of training: 1/2/3	Supervisor's function:		Clinical details and complexity:
			Degree of difficulty: <i>Basic/intermediate/advanced</i>

This assessment is tool designed to:

1. Enable judgement of surgical competency in **this** procedure and
2. To provide specific, constructive **feedback** to the trainee about their performance.

There is a judgement to be made in this assessment relating to the overall performance observed:
competent or working towards competence.

The following anchor statements are for general guidance about the overall observed level of performance. Suggestions for areas to consider during the assessment are listed at the end of this section.

For the trainee to be considered **competent** in the observed procedure, it would generally be expected that:

- The trainee was able to perform all aspects of the procedure safely and competently with no or minimal need for help, or in the context of an unexpectedly difficult case, may have needed more assistance for the more difficult aspects of the procedure.

For the trainee considered to be **working towards competence** it would generally be expected that:

- The trainee required significant help throughout or with the majority of steps.
- The trainee was unable to perform any of the necessary procedures to be safe and competent at this stage.

This trainee performed this observed procedure competently*

This trainee is working towards competence in this procedure*

*Delete as appropriate

Please provide written feedback for the trainee regarding their performance in the box provided at the end of this section in addition to your direct verbal feedback.

The following areas are suggestions to consider about the overall observed performance. This includes both the technical and non-technical skills necessary for the procedure and is not an exhaustive list.

Checking equipment/environment	Communication with patients and/or relatives
Peri-operative planning, e.g., positioning	Use of assistants
Technical ability	Communication with staff
Selection of instruments and equipment	Forward planning
Economy of movement	Dealing with problems and/or difficulties
Tissue handling	Documentation
Completion of task as appropriate	Safety considerations

Feedback:

What went well?
What could have gone better?
Learning plan:

Fellow's signature:

Supervisor's signature:

12.2.2 Case-based discussion

Structured assessments:			
Case-based discussion (CBD) supervised learning event			
Fellow's name:	Supervisor's name:	Date:	Brief case description:
Year of training: 1/2/3	Supervisor's function:		Clinical setting: <i>Outpatient / acute admission / inpatient / other</i> Focus of clinical encounter: <i>Record keeping / clinical assessment / management / professionalism</i> Complexity: <i>Basic/intermediate/advanced</i>

This is a **formative** tool to provide feedback to the fellow about their clinical knowledge in some or all aspects of this case. Please provide **specific, constructive feedback** to the trainee in verbal and written forms (in the box below) that you feel will enhance training and future learning. There is **NO** overall judgement relating to competence for this event.

Areas to consider:

1. Clinical record keeping (completeness, legibility, information sharing)
2. Clinical assessment (interpretation of clinical findings, "putting it all together")
3. Investigation and referrals (appropriate tests and referrals for case, rationale demonstrated)
4. Management (use of clinical knowledge, correct interpretation, use of evidence, safe and logical approach, dealing with uncertainty, appropriate advice sought)
5. Follow-up and future planning (linking current problem to future needs, rationale for follow-up)
6. Professionalism (respectful, logical approach to problem-solving, diligent and self-directed approach to patient and learning needs)

Feedback

What went well?

What could have gone better?

Learning Plan

Fellow's signature:

Supervisor's signature:

Fellow's Reflection:

12.2.3 Mini clinical evaluation exercise

Structured assessments:			
Mini Clinical Evaluation Exercise (CEX) Supervised Learning Event – Gynaecology			
Fellow's name:	Supervisor's name:	Date:	Brief case description:
Year of training: 1/2/3	Supervisor's function:		Clinical setting: <i>Outpatient / acute admission / inpatient / other</i> Focus of clinical encounter: <i>Record keeping / clinical assessment / management / professionalism</i> Complexity: <i>Basic/intermediate/advanced</i>

Areas to consider (there may be others as well):

1. History-taking (completeness, logic, focus)
2. Physical examination skills (approach to patient, technical skill, interpretation of findings)
3. Communication skills (patient-friendly, questioning style, empathy, clear explanation)
4. Clinical judgement (use of clinical knowledge, correct interpretation, logical approach, safe and confident, recognising limits and appropriate advice sought)
5. Professionalism (respectful, courteous, confident, use of team members)
6. Organisation and efficiency (efficient, logical and ordered approach)
7. Overall clinical care (global judgement of performance)

Feedback

What went well?

Learning Plan:

What could have gone better?

12.4 Members of the Curriculum Revision Committee

Prof. emer. René H.M. Verheijen, gynaecological oncologist, France (Committee Chair)
Dr. Kamil Zalewski, fellow in gynaecological oncology, Poland
Dr. Annamaria Ferrero, gynaecological oncologist, Italy
Dr. Rasiah Bharathan, gynaecological oncologist, United Kingdom
Dr. Jordi Ponce, gynaecological oncologist, Spain
Dr. Angela Mělo, fellow in gynaecological oncology, Italy
Dr. Dimitrios Haidopoulos, gynaecological oncologist, Greece
Dr. Gloria Cordeiro Vidal, fellow in gynaecological oncology, Spain
Prof. Ranjit Manchanda, gynaecological oncologist, United Kingdom
Dr. Annalisa Tancredi, gynaecologist, representative of EBCOG, Italy

12.5 Delphi questions

To start the new Curriculum development, Delphi rounds of questionnaires were held among the existing training centres. Questions were based on the existing curriculum and on the basis of other available national curricula (the abbreviations behind the answers refer to the curricula where these alternatives constituted a consensus).

The results of their answers formed the basis for the new curriculum. Briefly, an 80% consensus amongst the centres was necessary for a consensus in yes/no questions. Where more alternatives were possible, those chosen in at least 60% of answers were deemed to constitute a consensus. Questions where no consensus was reached during the first round were sent again.

QUESTION 1

Next to teaching on each of the specific gynaecological oncological diseases and their (surgical) treatment, the fellowship program should instruct in at least the areas of

1. (General and colorectal) surgery [RCOG, RANZOG, ABOG]
2. Urologic surgery [RCOG, RANZOG, ABOG]
3. Medical oncology (including pharmacology) [RCOG, RANZOG, ABOG]
4. Radiotherapy [RCOG, RANZOG, ABOG]
5. Palliative care [RCOG]
6. Clinical cancer genetics [RCOG]
7. Pathology (including immunology) [RANZOG]

QUESTION 2

Although instruction in many fields adjacent to gynaecological oncology may take place during and as part of the training in gynaecological oncology, modules of a maximal three (3) months [RANZOG] are COMPULSORAY for (more than one answer possible):

- (General and colorectal) surgery [RCOG, RANZOG, ABOG]
- Medical oncology (including pharmacology) [RCOG, RANZOG, ABOG]

QUESTION 3

Duration of modules in adjacent subspecialties should be:

- At least a total of six (6) months for the total of the electives

QUESTION 4

Although instruction in many fields adjacent to gynaecological oncology may take place during and as part of the training in gynaecological oncology, electives of a maximal three (3) months [RANZOG] are OPTIMAL [RANZOG] for (more than one answer possible):

1. General/generic surgery [RCOG, RANZOG, ABOG]
2. Colorectal surgery [RCOG, RANZOG, ABOG]
3. Vascular surgery [ABOG]
4. Urologic surgery [RCOG, RANZOG, ABOG]
5. Plastic surgery and wound care [RCOG]
5. Medical oncology (including pharmacology) [RCOG, RANZOG, ABOG]
6. Radiotherapy [RCOG, RANZOG, ABOG]
7. Radiology [(including nuclear medicine) RCOG]
8. Palliative care [RCOG]
9. Clinical cancer genetics [RCOG]
10. Pathology (including immunology) [RANZOG]
11. Management and leadership
12. None

QUESTION 5

Within modular training deconstruction of procedures is essential; therefore, assessment should not only take place per procedure, but also for segments of (selected) procedures separately (e.g., ureteric tunnel dissection) [RANZOG]

- Yes, modules should be defined, described and assessed within selected complex procedures separately (details t.b.d.).

QUESTION 6

The portfolio system implies that parts of the training program may take place outside the period of formal fellowship, e.g., as part of an elective within the general training. [EBCOG-PACT], as long as those parts have been followed inside an accredited facility.

- Yes, modules that may be passed before the actual start of a fellowship (but within an oncological elective) will be defined

QUESTION 7

In order to be eligible for recognized training (i.e., obtain the ESGO-EBCOG Certificate), the training programme should be followed:

- For at least a period of one (1) year in an ESGO-accredited centre [ESGO] and the remainder in either another European ESGO-recognised centre or an otherwise nationally recognised accredited centre outside Europe

QUESTION 8

All assessment should be competence-based, i.e., on competency roles or domains (e.g., CanMEDS/ACGME) and on competence levels (1–3/5) [RCOG].

- Yes

QUESTION 9

The domains of core competencies for the purpose of the ESGO curriculum will be defined according to:

- ACGME (Accreditation Council for Graduate Medical Education)
 - i.e., six (6) core competencies
 - 1. Practice-based learning and improvement
 - 2. Patient care and procedural skills
 - 3. Systems-based practice
 - 4. Medical knowledge
 - 5. Interpersonal and communication skills
 - 6. Professionalism

QUESTION 10

Competence levels for the purpose of the ESGO Curriculum should be divided into:

- five (5) levels, i.e.,
 - 1 (passive assistance/knowledge of)
 - 2 (perform under direct supervision)
 - 3 (perform with some supervision)
 - 4 (perform without supervision)
 - 5 (perform and supervise/teach)

QUESTION 11

OSATS are required for assessment of surgical skills [RCOG]?

- Yes, but other validated assessment tools may also be used to complete the portfolio (e.g., APSS [RANZOG], GRITS, STSAF)

QUESTION 12

A minimal total number of formal assessments of surgical skills (such as OSATS) on complex procedures should be required. [RCOG]. This minimal number should be per:

- Any type of radical/complex procedure (t.b.d.), with at least two (2) assessments on the required end-level (summative assessment) for each of these procedures
(Q: index procedures should be defined and we should consider whether there is also a spatial/time limit within which assessments should be accomplished (see also Q. 14) and finally reached the end-level)

QUESTION 13

The minimum number of (formative) assessments required per year is:

- At least three (3) formative assessments for each of the procedure-defined modules

QUESTION 14

The minimum number of assessments required per (selected) procedure is:

-At least two (2) summative assessments should be made for all procedures by two (2) assessors

QUESTION 15

A multi-source feedback (MSF), including a self-assessment of the trainee, is required at least once a year [RANZOG]

- Yes

QUESTION 16

A multi-source feedback (MSF) of the training team is required at least once a year.

- Yes

QUESTION 17

The curriculum describes the clinical training [RANZOG, RCOG] (as opposed to research training [ABOG])

-Yes

QUESTION 18

The formal established curriculum program should cover at least two (2) years of training and at the most:

- Three (3) years of full-time equivalent training

QUESTION 19

The use of a portfolio implies that the time to acquire the necessary elements may vary between individuals, depending on exposure, skills, personal circumstances and employment.

The portfolio/training of an individual trainee should be completed within:

- Four (4) years

QUESTION 20

Research should be part of the training programme to the extent of at least one (1) peer-reviewed paper as first or senior author.

- Yes

QUESTION 21

Modules/issues that may be covered (expected level of competence 'can manage/perform independently') during an elective as European-wide defined for general training [EBCOG-PACT] are [NVOG]:

1. General assessment of an oncological patient
2. Peri-operative care
3. Diagnostic laparoscopy
4. Ovarian cystectomy
5. Hysteroscopy
6. Small vulvar procedures
7. Loop excision/conisation of the cervix

8. Hysterectomy for early stage endometrial cancer
10. Histological sampling (Tru-cut biopsy/incisional biopsy)
11. Assessing and planning management of gynaecological tumours
12. Knowledge of cancer genetics
13. Knowledge of palliative care
14. General knowledge of oncological pathology

QUESTION 22

Minimal invasive surgery is part of the armamentarium of the gynaecological oncologist. At the end of training, a gynaecological oncologist should be able to perform independently.

-In principle only selected radical procedures, i.e., pelvic lymph node dissection (t.b.d.)

QUESTION 23

Advanced simulation training (virtual, animal model, cadaver) is a prerequisite for training in complex laparoscopic procedures.

- Yes

QUESTION 24

Simulation training (virtual, animal model, cadaver) should also form part of surgical training for open procedures (as it is for laparoscopic procedures).

- Yes

QUESTION 25

A written exam, i.e., the ESGO Exam, is part of the Curriculum and should be:

- Compulsory

QUESTION 26

An oral exam is part of the Curriculum and should be:

- Not required

QUESTION 27

Next to competence-based assessment, volume criteria need to be defined.

- For both surgical and other skills

QUESTION 28

If volume criteria are important, they should be defined for (more than one answer possible):

- Selected specific procedures (e.g., debulking, radical hysterectomy, etc.)

QUESTION 29

Volume criteria may not be universally sustainable, therefore:

- For certification, training should include a defined number per a limited number of procedures.

QUESTION 30

Pre-malignancies should be part of the training spectrum of a gynaecological oncologist and is not compulsory for general gynaecological training.

- Yes

QUESTION 31

During the fellowship, a real time portfolio (i.e., not completed only at the end of the training, but after completion of each element/procedure) must be kept of modules followed and cases performed together with the assessments. The portfolio should preferably be accessible online.

- Yes

QUESTION 32

The logbook should contain documentation of levels of proficiency/competency (see question 9) at least once a year.

- Yes

QUESTION 33

Criteria for training centres should be defined on basis of the curriculum and ensure adequate exposure by also defining a minimal number of trainers and procedures.

- Yes

QUESTION 34

Volume criteria for centres should include a minimal case load:

- Of at least 150 new patients with a gynaecological cancer diagnosis per year [ESGO-EBCOG]

QUESTION 35

Volume criteria for centres should include a minimal number of radical procedures:

- Of at least 100 per year [ESGO-EBCOG]

QUESTION 36

If a centre cannot fulfil the criteria, specified procedures or skills may be learned in an affiliated hospital (which then needs also to be assessed):

- Yes

QUESTION 37

The minimal number of radical procedures should include both open and laparoscopic cases for at least all pelvic procedures.

- Yes

QUESTION 38

Qualitative criteria for accreditation should include:

1. Availability of data-managers
2. All staff has at least once in the five (5) years prior to accreditation participated in a train-the-trainers course
3. Radiotherapy should be available in the hospital
4. Radiotherapy should be available in the or in a affiliated hospital
5. All new cases should be discussed in a multidisciplinary team
6. Availability of theatres equipped for teaching both open and minimal invasive surgery.
7. Specialized oncology nurses should be part of the clinical (ward) as well as out-patient team.
8. The hospital should have a post-graduate teaching programme across all oncological specialties.

QUESTION 39

Accreditation of a centre should be valid for:

- Five (5) years (ESGO-EBCOG)

QUESTION 40

Re-accreditation of a centre can be on paper (without an onsite visit):

- Twice, each time after five (5) years (ESGO)

QUESTION 41

Assessment at re-accreditation of a centre should include:

1. Review of the number and performance of fellows in the past period
2. Structured feedback on paper from the fellows and trainers (details t.b.d.)

QUESTION 42

The accreditation committee can decide to grant conditional accreditation (e.g., if recommendations are being made that should be fulfilled within the normal period of validation) for a period less than the normal period of validation:

- Yes

QUESTION 43

Re-accreditation may take place

- After review of an on-paper application

QUESTION 44

The accreditation committee can decide to advise the Council to withdraw accreditation due to exceptional circumstances before the normal expiration date of the accreditation

- Yes

13. Recommended resources

Aim:

To list resources which will be useful to the trainee during his/her fellowship
